

Customer Review for Pumpkin LM-C0676 Toyota Universal 6.2" Android 4.4 Double Din Car Stereo

By HalfPint

Well, with all the help and advice I got brave enough to see what happened...*It's installed and all seems good.* I have accessed the menu and set the **steering wheel control** OK and installed the **GPS** in the compass cluster. Was a little worried about that I'd break the dash panel, it put up more resistance than I expected, but I didn't.

The **mapping** works great (though haven't been anywhere yet, but locked on to the location really fast).

The OE brackets line up perfectly. And the unit fits the hole perfectly. It powers up with the **Toyota logo** straight off. It looks OE which is great.

I plugged three of the five connections out of the OE head into the back as shown earlier. The others don't seem to

connect, one is to the Aux and we know that doesn't work, not sure about the other but it all functions with the exception of the iPod. I didn't connect any of the RCA's or other wires at this stage.

I plugged the **iPod** lead and the **USB** lead supplied direct into the unit ([LM-C0676](#)), but not sure whether the slots are different. Anyway, the iPod is connected (powered and shows on iPod screen), but not communicating with the head unit.

Now I just need to learn how to use Android.

So here's the installation process:
