

# All Car DVDs Players Are Not Equal

Imagine my surprise when I went looking for a DVD for my car. We were to take our grandkids for an extended road trip and I thought it would help it to a DVD player. The trouble is “monitor”. I saw all these good priced monitors and thought that is real great to get the monitor and the DVD for that price. Then I discovered that they really did mean just the monitor. Not the DVD in a monitor, but a monitor.

If you want a monitor with DVD you need to look for a monitor that includes the DVD. Otherwise all you get is a “monitor”. So here is some quick information on monitors and what to look for.

The flip down car video monitor is probably the one you are most familiar with. It is mounted to the roof of the car and flipped down when in use. Then is is flipped up out of the way. It is used by the back seat passengers and the monitor usually ranges from 7-12 inches.

The Overhead Car Video Monitors can be attached to the ceiling of the car. Most usually you find them in mini vans, and SUVs because they require some of the head room. It usually fits over the inside light. These can be 7-20 inches in width.

Headrest car video monitors are built into the back of the headrest. You can buy the whole headrest since most of you will not want to cut out a chunk of your present headrest. Keep the old headrests so you can put them back in the car when you trade it in, thus allowing you to keep the head rest for the new car.

Headrest Portable [car video monitors](#) are essentially portable

DVDs. They can be attached to the back of the headrest and be moved about. These range in size from 5-10 inches. This was my choice because it can be taken out of the vehicle and used in to motel room, the camper, the trailer, a tent...well, you get the idea.

In-dash car video monitors are put in the dash for the entertainment of the front seat passenger. Driver you need to keep your eye on the road. It can be flipped up and down for convenience and space. They are usually less than 7 inches.

The Sun visor car video monitor can be mounted into your visor or you can replace your original sun visor with it. It is usually 5-7 inches in length.

Mirror car video monitors are made to fit over the rear-view mirror. They are great to be used as a rear view camera. It is very small, usually no more than 4 inches.

Now the most important thing to remember is that you need the DVD with these monitors if you wish to play a DVD. So remember that if you do not want to buy a separate DVD you need to look for a monitor that includes a built in the [car DVD player](#). They are out there and can be found easily. Just don't be fooled into buying a monitor thinking it has a DVD included.

# Different Models of Car DVD Players

Vacationing can be a lot of fun but some of them are going to require a lot of driving or riding in a vehicle. Children can get bored and some of them will get into trouble because of it. A car DVD player can keep their mind busy and keep them out of mischief which will make the trip much better for everyone.

There are different ones that people can choose from. Some of them are a part of the vehicle while others are aftermarket ones that can be moved from one vehicle to another because they fasten to the back of the seat. This is something that will be beneficial for the children and the parents.

Having an item like this can make the trip easier on everyone. A child does not always understand that it can take a while to get from one place to another. They will get impatient because they want to have fun.

Watching movies is going to be great entertainment for them. There are many different movies that they can watch. Using something like this is not going to create a lot of extra bulk to take with them.

Games that are meant for traveling can take up a lot of space and many of them do not provide a couple of hours of entertainment in one setting like a movie will. Some require the person to keep track of many tiny pieces too. Some of the DVD players are equipment with a place to plug in a game system too.

Most of them can be placed so that all of the passengers in the back of the vehicle are able to see the screen. Others will have two screens so that everyone can see the same movie. There are many differences between one model and the next.

Headphones or ear buds can be worn while using these so that it is not disturbing to people who are not watching the movie. Other passengers can listen to the radio, sleep or just have silence. There are several things that people use to keep themselves entertained.

Figuring out the best movies is usually the most difficult part of using something like this. These are easily plugged into the vehicle for power. Some vehicles have spots in the front and the back of the vehicle that have these. This prevents having to run the wires from one end of the vehicle to the other end.

There are adapters that can be purchased to go along with these as well. Every vehicle provides different options because of the different placement and sizes of the interior structures. Some people will drive a van while other people are going to be driving a small car.

The sizes of the screens of these can vary as well. Some will have a small screen while others are going to have something that is a little bit bigger. There are many reasons why people are looking for certain models of them.

Everyone can be entertained while they are waiting to get to the next destination. Ones that are not fastened into the vehicle will be able to be taken into the hotel rooms also. This gives a person many options for watching a movie.

Children have many different movies that are their favorites. They can pick out a few movies to take along with them on their trip. The number of movies that gets taken will depend on how long the trip is and how many times somebody wants to watch a movie over and over.

There are many different models of [car DVD players](#). Each one of them will have different features that people are looking for. Not every customer is going to be looking for the same options. There are many brands and models that are going to be popular because everyone has a different opinion about what is the best when it comes to electronics.

Whether someone is driving to work or driving around town, it is nice to be able to listen to music with a good quality sound system. Many other [car accessories](#), like remote starts and alarms can also be beneficial. Visit <http://ift.tt/29FCwlm> today and find a great deal on all of these products for your vehicle.
