

Customer review on portable CD player built-in 16 hours rechargeable battery (PC0022B)

I was extremely happy to find this player. It is well worth the price. I was very impressed by the substantial packaging. The instruction booklet is comprehensive. One thing I was confused about was the memory. When turning it off, it is supposed to return to the point where you left off. I wrote to the email address and got an answer quickly. I was turning it off by the "stop" button. For the memory to work, it has to be turned off on the side. I'm including that info in case anyone else may have the problem. I am more than happy with this player. It has a sleek look and the sound quality could not be

better. And the benefit that the company is quick to respond to any questions or issues is definitely a plus. You can't go wrong with this little gem. I am actually considering ordering a second one to have as a spare for the day when you can't find CD players.

I was very pleased with this DVD player I like the fact that it's rechargeable saving \$ on batteries. Also was pleased that it had an aux jack as I was able to use a portable external speaker for when I am doing housework or crafts. When I first received it, I walk around with it and not skip. The sound quality is excellent. I use it mostly for audiobooks but have also played music DVDs both are crystal clear.

[Customer Review on Portable Music CD Player with on-ear Headphones \(BQ0254B\)](#)

I needed a compact CD player with speakers for a specific purpose – playing a classical CD's at night when I retire. Due to limited space, I needed something small so I took a chance on this item. Overall I am pleased with my purchase.

OK it not professional equipment by any means but the speakers give more than adequate sound quality.

Size is important – not much larger than a portable CD “pancake” player

Also, I listen to audiobooks on CDs while driving and chose this because my new car has no CD player and I don't like using my phone for audiobooks. Unlike most portable CD players, this one has its own speakers, so if I want to finish listening to an audiobook when I'm not in my car, I can. The USB power works fine, and the aux jack works with my car's audio speakers.

Overall once I mastered the operation of the unit it plays well – don't lose those operation instructions!!. Looks and feels like a well-made machine but time will tell.

[Best Pumpkin Customer Service](#)

[The product](#) is as good as advertised. The product is not the only story behind how amazing was this experience. I lost the manual after it arrived, I got in contact with the company and they sent an e-replacement manual right away. After I broke the faceplate that serves as a trim to the radio. I contacted them again to see if I could buy another faceplate and they sent one free of charge. Not only the product is amazing, but their customer service is superb. I have them as my go to vendor for other things.
