## Customer review of Pumpkin Android 5.1 Car GPS Stereo for VW

A few months after [Pumpkin Android 5.1 Autoradios](#)' Release, customers like these adorable head unit very much and

they also have something to say, let's check out together:  
Installed in **VW Touren fra 14**:

I was very hesitant to buy this [android head unit](#) based on one review, but then I found a Youtube video with a live demo.

In short: it's a cool [android 5.1 car stereo double din for VW](#). It's kind of like having a tablet in your car, with a few add-ons like radio and a DVD player. I also have a backup camera hooked-up (I could use the pre-installed one instead of having to use theirs). Apps install like on any other Android system. So far I've installed Pandora radio and Waze. There is a built-in GPS, but if you have a hotspot function on your smartphone, you can use Google Maps or Waze as well.

The installation was pretty straightforward in my **2011 Tiguan SE**. The supplied wire harness fits perfectly, and I was able to reuse the existing radio antenna, GPS antenna, and backup camera.

The lines on the backup camera indicating where you're going will only work once the system has fully booted. The camera itself works immediately.

—by S

For those that said the cd/DVD player of this [android 5.1 autoradio gps for vw](#) will not accept a cd/DVD all the way, you need to remove two screws on top of the unit prior to install.

PROS:

- Perfect fit in **2010 Jetta**, pure Android, Quad Core processor
- VW wiring harness included, just plug and play

– steering wheel controls work when the included CANBUS adapter is installed. Plugs into the harness. But you need to program the controls by selecting steering from the main menu then selecting MODE. You then press which function you want to program such as “volume up” on the touch screen then press the “volume up” button on the steering wheel for the unit to learn which buttons do what. When complete, press the OK/save icon. I got volume, next/back, and call answer/end buttons to work.

– GPS appears to work. Finds my location quickly but I haven’t tried the interface for navigation yet. I always use my phone for nav so might not use this capability. I did notice that you can store gas mileage information in the GPS section which is handy.
