How to install a headrest DVD player in a car?

Nowadays, families are spending more and more time in their cars than ever before, which means children are getting more bored and restless in the car. So sometimes they just need something to keep their attention on trips.

A great solution to keep your passengers occupied is a headrest DVD Player. This way, everyone can enjoy their favorite movies or TV shows, significantly reducing travel time. Fortunately, installing DVD players for car headrests is easier than you imagine.

In this article, we'll take a look at installing headrest monitors and show you everything you need to know. Read on to learn all the facts.

The headrest:

To install this DVD player in your car, you must first remove the headrest. This is because the power cables and connectors must pass through the holes in which the headrest is mounted on the seat.

Then remove the cover far enough from the bottom of the seat that you can fish out the wires that you passed through the holes at the top.

Currently, most players can be solved directly with the mounting bracket without removing the headrest.

Hiding the power cables:

Typically, the cables are connected to the main unit under the dashboard. However, you can also feed them to a separate power supply if you prefer.

In order not to make the wires visible, we recommend to run them under the carpet. Otherwise, it looks sticky. Also, it is quite likely that exposed wires will eventually get caught on a person's foot and be pulled out.

The use of a DVD headrest is also ideal for the IPTV service.

Connect the sound:

Now you need to connect your DVD player to the stereo in your vehicle. This is not necessary for all DVD players, but it definitely offers the highest sound quality.

Note that when connecting the wires to existing stereo cables, you need to strip the ends to connect them together. Be careful when doing this. We also recommend soldering the splice if possible.

Install the DVD player:

This is actually the easiest step in the process. Once the wiring is complete, you will need to slide your new headrest into place. Be careful when installing the headrest posts. If the wires are kinked, this can prevent proper power supply and affect the sound quality.

So take it slowly. Once the headrest is secure, connect the power cord.

Clear up your mess:

The final step is to look for exposed wires. Tie them up with tape and hide them out of sight. Make sure everything is safe so that nothing comes loose and affects performance.

To install a headrest DVD player:

Installing a DVD player with a headrest is not rocket science. All you need is a little patience. There are many great headrest DVD players on the market that are suitable for all budgets. There are even clip-on models if you want to keep them as your original headrest.

DVD players are a simple and convenient way to keep everyone happy during long hours on the street. So choose your favorite action film or animated classic and get ready to enjoy the ride!

[Pumpkin](#) offers a variety of headrest styles and is easy to install and use.

Why do people still buy a portable Blu-ray DVD player?

Light and portable:

If you want to experience HD picture quality anytime, anywhere, a portable Blu-ray player is the ideal choice. Since the portable Blu-ray player is powered by an integrated battery, it can be used almost anywhere. The playing time of the device is on average between 3 and 5 hours. If an outlet is available, it can usually be powered from the power cord.

Comprehensive functions:

In addition to Blu-ray discs, portable Blu-ray players can also play DVDs and CDs. Many portable DVD players also have USB interfaces and SD card interfaces. Depending on the range of functions, the portable Blu-ray player can also play video, audio and image formats. For home use, the device can also be connected to the TV via a cable.

High usability:

The screen size of the portable DVD players in [Pumpkin](#) is between 10.1 and 14 inches and some can be swiveled and rotated. Therefore, you can always optimally adjust the viewing angle. There is also a headrest stand for Blu-ray players, which significantly improves the comfort of the automotive film experience. An adapter that is charged via a cigarette lighter is particularly practical.

Conclusion:

At this point, you now know what to look for when buying a portable Blu-ray player. You know all the important points and can adapt them to your wish list. Before you decide on the best Blu-ray player for on the go, you should definitely have a look at our 12 inches and 14 inches Blu Ray DVD players. You may have found a suitable Blu-ray player here. Regardless, portable Blu-ray players are useful playback media for traveling movies, videos, photos and music. However, if there are only one TV and different film requirements, it can also work at home. Portable Blu-ray players have an advantage in this regard since connecting headphones doesn't bother others. You can also connect a Blu-ray player to your TV and use it for your home theater. As you can see, a portable Blu Ray player offers you a variety of entertainment options, which is why the purchase will definitely be worthwhile for you!
