Below is one review from JC

“Nice product. good quality and good price. I installed this in my 2013 Jeep Wrangler to replace factory RHB 430N. The Pumpkin unit performs very well and true Android 4.4. is awesome. I have installed many apps from Google Play and had no problems. I would give it 5 stars, but here are my reservations (in order of importance) 1. ****IMPORTANT****

Security setting (screen lock/pin code/etc.) have been removed or disabled. So anyone who has access to the unit (if it's stolen) will have my contacts, email, music, etc. There should be an option for screen lock/unlock at power up to prevent this. 2. Documentation is a little weak and no specs for steering wheel control emulation makes getting that work a hassle – trial and error. 3. The radio tuner is a little weak. Local stations that I have no trouble receiving on other radios come and and out. 4. The 'stock' launcher is a little limited so I am using Nova Launcher. This works great, but there is no way to turn radio app 'off' so once you launch it, it will keep playing in the background unless you kill it. 5. The unit takes a few moments to 'boot' so having a sleep mode would be ideal and could not be much of a drain on battery. 6. The stock music app is pretty much useless – no way to search for songs/artists, just scrolling. If you have more than a couple dozen songs stored on SD card, you have to download another player that will let you search. I am using Google Play Music and it's working great. With just a little more polish on the software side and I'd give it 5 stars. Note: I am using a 64GB micro SD card and it's working great. Windows users will have to download an SD formatter, but formatting as FAT32 on 64GB allows this unit to see all 64GB. Holds a LOT of my music. ”

The Customer Review for

Pumpkin 2 Din Universal Car DVD GPS Navigation Pure Android 4.4 kitkat Stereo Head Unit with 6.95 inch LCD HD Capacitive Touch Screen

Below is one of our customers review:

I purchase this for my Nissan 370z with the Bose system. This radio is fantastic. It took me a while to hook it up but managed to get everything to work. 'Steering wheel controls and backup camera all working'.

I suggest that you download and install Poweramp from Playstore. It is far superior to the built in player. I am using Torque with a Bluetooth adapter and it works.

I read comments about the quality for the built in mic, but I find, even with my loud exhaust it is OK. It comes with an external Mic but I did not install it.

If you use the voice app on a Samsung phone you can even send a test message. You just need to have the Bluetooth screen active. You need to double tap the voice key on the phone to activate.

I have the GPS sensor mounted under the dash by the glove box

and it works Flawless. No need to have it on top of the dash, as long as there is no metal blocking the signal. I use HERE MAPS as it is the one I am use to.

I hope in the future they will have a radio that is Sirius\XM compatible.

Communication with AutoPumpkin has been great. They always responded to my questions

I will recommend this stereo and Pumpkin to other people.
