How to choose a CD player that suits you?

The abbreviation CD in the CD player means “Compact Disk”. The first CD player was sold in 1982. There are different types of CD players. Which one is right for you depends on how you want to use the product.

A basic distinction is made between single CD players, CD players in compact systems, and [portable CD players](#). There are also CD players specially designed for children. A good CD player plays various audio formats. In addition to the normal audio CDs, there are also self-burnt and rewritable CDs and the MP3 format.

In general, there are three different types of CD players,

which mainly differ in terms of equipment, design, and use:

- A CD player for connection to a stereo system
- CD player permanently integrated in compact systems
- Portable CD player
- We would be happy to advise you on the right CD player for your application.

What are the advantages of a CD player compared to an MP3 player?

A CD player is particularly suitable for music lovers who value good sound quality and want something tangible in their hands.

An MP3 player can play music in MP3 format. With this format, digitally stored audio files are compressed in such a way that the amount of data can be significantly reduced, which can have a significant influence on the quality.

It can, therefore, be explained that about 350 minutes of music adapt to an MP3 CD, but more if the quality is lower. For comparison: only 74 minutes of music fit on a normal audio CD.

But what is the advantage of a CD player? On the one hand, the CD player can often play MP3 formats, while the MP3 player cannot play CDs. More importantly, data compression can result in a loss of sound quality. The music on the audio CD is exactly what the producer asked for.

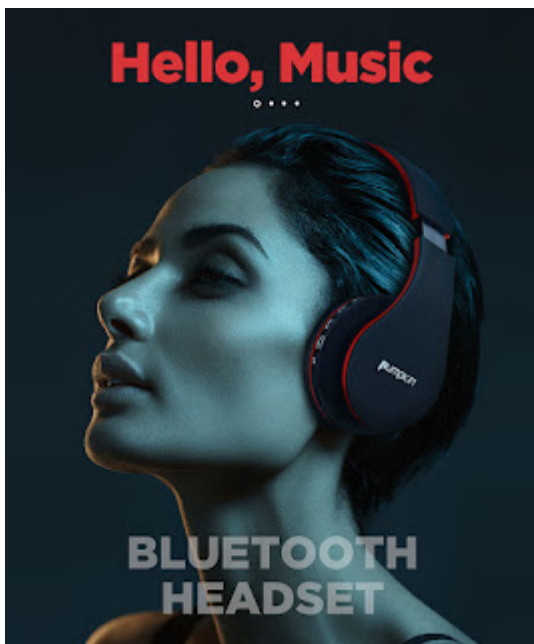

In addition, many music lovers still keep the CDs they have collected over the years on their shelves. They not only attract attention in the living room but are also a form of data storage. On the other hand, MP3 files are often stored on a computer, USB stick, or external hard drive, which can no longer be used if damaged or lost.

Many people, especially those who are arbitrary, prefer to

hold something in their hands. In addition to the beautiful cover, an audio CD also contains a playlist booklet, letters, reference information, and pictures.

Headphones that let you move more freely

You have the music, you have telephony, you have freedom of movement – but you don't have a cable. That's the difference wireless headphones featuring Bluetooth make. Easy on the batteries Bluetooth headsets allow for hours and hours of listening pleasure. Furthermore, without a cable to be careful about, they make great travelling companions.

[Pumpkin](#) also released [wireless Bluetooth headsets](#) recently. The features of them are followings.

Active noise cancelling technology: Greatly reduce the noise during travel, work and anywhere in between. Advanced active

noise reduction technology can eliminate aircraft cabin noise, urban traffic or busy offices, allowing you to focus on what you want to listen to and enjoy music, movies and videos. The noise cancellation function can work normally in wired and wireless modes.

Comfortable design: The earmuffs imitate the texture of human skin to ensure lasting comfort. They are foldable and stretchable, so you can find the perfect fit and outstanding durability without constraints. Zihnic is the best choice for boys, girls, children, teenagers and adults for travel, sports and daily use.

Bluetooth 5.0 connection: used to provide fast and stable Bluetooth connection. Simply slide the on/off button and the headset will enter pairing mode. The wireless headset is compatible with all Bluetooth-enabled or 3.5 mm plug cables! You can also receive calls and perform hands-free communication through a special noise reduction technology microphone. Pumpkin headset is compatible with all mobile phones, tablets, Pods and PCs.

Long battery life and dual modes: Pumpkin headphones have a built-in rechargeable battery, 10 hours of music time, and 2 hours of fast charging. After playing for 20 hours, you can switch to wired mode and enjoy music without interruption. You don't need to worry about power shortages during long-distance travel.
