

[Customer Review] Pumpkin Android 5.1 Adjustable Angle Touchscreen In Dash Car Radio Receiver DVD GPS Navigation

[Pumpkin Android 5.1 Car GPS DVD with Adjustable Angle
Touchscreen](#)

Awesome stereo has many features.

-by LVN

Awesome stereo I would recommend this to a friend. I purchased this [Pumpkin](#) double din stereo for my [Jeep](#) grand Cherokee 2004. This was not an easy install as my car accepts only a [single din stereo](#), but I have a long history of installing stereos, and already had a fairly good idea of what to do. I also purchased a aftermarket bezel that allowed me to put the two din into my one din stereo.

For anyone who does not have any sort of previous electronic or stereo experience, this would normally require custom professional installation if you did not already have a double din space.

As for the stereo itself, let me start by saying that the stereo is very complicated and has many features. It is made by [pumpkin](#) which given how much German was in the manual I believe may be a Company of German origin. I am very impressed by the stereo. I have watched movies on DVD, used apps like the Calculator, surf the Internet usein the Wi-Fi at my home and at businesses like McDs that offer free Wi-Fi. I had no problems with logging in to any of their permission screens. The Internet antenna is very impressive the FM radio antenna Works well and also offers a auto-program feature I ended up with probably 50 local stations. Some of which, obviously, were better than others.

This is an awesome stereo and I hope it lasts for a long time and appears that it will. I have been using the stereo for about three weeks and I have enjoyed every feature. It also has a function where you can turn off the display while still

listening to music and this is great because I have sensitive eyes and nighttime driving a 7 inch screen can be very distracting so I thought this was a great feature. There are many other functions and features that I have not used .

[How to Connect the Digital TV DVB-T Box to Pumpkin Car Radio GPS DVD Stereo](#)

Please Note:

All the following description are based on the [Pumpkin](#) Car GPS Radios, if your devices is not purchase from us, those tips may be not suitable!

If you are using the head unit with rear side like the following picture showed with [DVB-T](#) TV port,

you may connect the digital TV box like this, and you can also operate and control the TV box via the touchscreen of the headunit. And the TV box gets power from the headunit, so you do not need to wire extra wire to get power for the box.

LM unit from Pumpkin

Connection Method 1

If your are using the car gps stereo with rear side like the following picture showed without DVB-T TV port, only with RCA video/audio input port,

you may connect the digital TV box like this, but you can not operate and control the TV box via the touchscreen of the headunit, you can only use the remote control of the TV box to do that, and the headunit only works as display monitor. And you may need to connect the power lead of the TV box to give power supply to the TV box.

----->The other Pumpkin units

Connection Method 2

Notice: The Male to Male RCA Cable and Car DVD Player are not included.

And now we also have some newly listed item which with the rear side like the following link shows, you can use the convert cable which is standard include into the digital tv box to connect. You can also operate and control the TV box on the headunit screen, and the TV box gets power from the headunit.
