- . Compatible with top GPS software
- . iPod / iPhone audio input
- . Steering Wheel Control function
- . AV-in for reverse Camera
- . FM / AM RDS Radio Data System

After Installation:

What our customer say about this dvd system for car:

I purchased this wince 6.0 gps and fell in love. I had this car dvd system professionally installed and everything seems to work fine for me. This wince car dvd fits perfectly. The [rear view camera](#) is a great feature for a small person such as myself driving such a big vehicle. With the music; the radio connects to my phone via Bluetooth. It still plays when using the navigation system or the rear view camera. The DVD feature has to be my favorite part. I have a 1 yr old so that keeps her quiet on road trips. I have yet to find something negative to say about this product.

—by **Ebonye Rowan**

So far so good have had unit for a day. So far I installed radio and GPS unit will do [backup camera](#) next week. It took about 20 minutes to switch radio and install GPS. very easy. Steering wheel controls where easy to map on the unit. Sound

was good. I do not have JBL sound system. My old radio winning when I used the aux function. Now everything sounds crystal clear. you get a lot for the money. The fit and finish were spot on. Will follow up once the backup camera is installed.

[Customer Review on Pumpkin Upgraded 10.1 Inch Auto Headrest DVD Player](#)

Today we'll check together what our customers said about another Pumpkin 10.1 Inch Headrest monitor auto dvd player.

Brief Introduction of Pumpkin new [10.1 Inch Rear Seat Headrest DVD Player](#):

After Installation:

I've only had [headrest tv](#) for one day and i will update review if required, but as of yet this is GREAT. I do not use DVD's, ever. I strictly download movies and shows for use at my house as well as a tablet for my daughter when we go out to restaurants. This [car video monitor](#) doesn't require data and its convenient. So when i started looking at in car entertainment this was also a requirement. I had purchased a very cheap portable DVD player that also took USB's to try. It required me to use software to change the size of the video (all my movies were to high resolution for the crappy screen) as well as sometimes changing the codec to allow the video to be recognized.

I purchased this [lcd monitor](#) with 1080p with the hopes that i

would not have to adjust resolution anymore. Amazingly i took a thumb drive with movies out of my tv and stuck it in the player and this headrest monitor started playing instantly! No issues, full resolution. FINALLY!!!! this will be amazing on car rides and i can't wait to use it.

The install was super easy, they give you lots of choices to make sure you have something that fits your headrest "posts". once installed it looks great, if not HUGE!! I really didn't realize how big 10.1 inches was until it was installed in car, its MASSIVE!!!

There are a lot of options on this car tv monitor i will never use, such as the hard-wire to aftermarket head unit (nice option though), as well as the games and such. But those are all extras to me. I paid 130 ish for a HD screen that allows me to quickly throw movies onto a thumb drive and pop it in and go. Not having to deal with DVD's and adjusting digital movie resolutions and codecs is worth its weight in gold to me. As of now i have tested a 32GB USB 3.0 thumb drive as well as a 8gb 2.0 and it worked great and I will be testing more later. 32GB worth of movies is more than enough for 8 hour drives!!!

Can easily be removed as well in case you are parking in a not so nice area or for long periods of time and you don't want people to see the big screen. In the pic of the mount i posted you can see a silver thumb screw. All you do is unscrew that and unplug the power cord and it will slide off the mount and you can stow it under your seat or wherever, very convenient.

In the pics i haven't removed the screen protector thing that comes on it.

[Customer Review on Pumpkin 10.1 Inch Car Headrest DVD Player Multimedia Player Raspberry Pi Monitor with HDMI Port and Remote Control](#)

Maybe you're looking for a suitable [auto dvd player headrest](#) for your kids to get rid of the boring long road trip. But there're too many [headrest monitors](#) in the market and you're really not sure which one to pick up. Then you should listen to what our customers say about our [headrest dvd player for car](#). Then you will have a decision.

[10.1 Inch TFT LCD Wide Digital Screen Ultra-thin Car Headrest DVD Player Multimedia Player Raspberry Pi Monitor with HDMI Port and Remote Control](#)

After Installation:

I was searching for a long time for an [overhead headrest DVD player](#). I had one in mind, but it got discontinued. All others were ridiculously expensive or poorly rated. Then I came across this. A lot of worthy excellent reviews. I purchased the 1003 that is 1080P capable with IR headphones.

Install was a breeze. I found a You-Tube video that was 44 seconds long, and literally, that's how long it took to install.

Since then, it's been a hit with my 4 year old.

I've had no issues with it reading DVD's thus far – granted they have been only consisting of Caillou and babyeinstein.

The big test will be this week when we go on vacation, but I have confidence that this will help getting us through the upcoming 6 hour drive.

Worth every penny.

PS. One minor complaint, the Finger lip that you use to lift the dvd off the spinner is a little small, so it can be sometimes a little difficult removing a disk from the player.

-by Joe

Tried many mobile car tv's before this and they all didn't fit well on the back of the front seat. They either wanted to fall, velcro was weak, or needed to buy an additional kit to hold the tv. Bought this one and it is what I should have bought for my child in the first place. This one locks into the 2 headrest metal rods and doesnt move. The screen faces down to change the cd on the back then close then screen goes to upright again. Child cant mess with the buttons as much nor kick the screen as much as the other walmart brand screens. You can even play a video game on this, which i guess is a plus. The only down side is it doesnt have an internal battery which is fine for me and the remote buttons are so many and tiny. Otherwise it does exactly what it needs to do for a child to watch cartoons and not be a hazard in case of an accident and the screen falls. The screen might still fall but will be much harder to fall than the velcro ones. Thats my disclaimer. Enjoy!
