

The improvements in automobile DVD aftermarket

The improvements in automobile aftermarket accessories market in the last decade that have been nothing short of astounding.

Some of these players, for example, can do things literally unheard of just a few years ago. They can run a GPS navigation system, play music and display a television picture all at the same time.

They do this by splitting operating functions in order to display all three at once, which is why answering the question “What is a picture in picture car DVD player?” might be something worth exploring.

For those who are thinking of adding one of these versatile and highly entertaining players to a vehicle, it can be helpful to think of how a car DVD player displays all three functions as being similar to how a television makes use of PIP or “picture in picture” capabilities to show not only a currently-running television show but also, perhaps, a TV program over on another station, both at the same time.

Picture in picture in a car DVD is similar to this, though the intention is more to provide different screens at the same time to operate the player itself.

This isn't to say that it can't display a television program through its standard analog TV tuner, because it can do that.

What it (PIP) more has to do with is giving the operator of the player a way to set up the GPS navigation, get it running, select music that is going to be played or a radio station that will be listened to and then task the player to also run a movie or show a TV program.

It does this through use of embedded software and tuners contained within the player's memory, operating system (usually [Windows CE](#)) and microprocessor chip.

The software that CE makes use of will task the picture-in-picture function without a user needing to know much about how it works. And once the picture-in-

picture is pulled up, all of the different multitasking applications can take place.

Usually, picture in picture functionality is most often found in what are called “2 DIN” car DVD players, which are players that take up about 100 mm or 4.25 inches of height in a car’s dashboard. DIN is just a way of denoting whether the height of the player is 50 mm or 100 mm. A 1 DIN player is usually half the height of a 2 DIN player.

Most 2 DIN car players can accommodate picture in picture as well as a number of other functions that won’t be found in a single DIN player.

For people who may be more comfortable with operating a television set than a car DVD player, picture in picture can come in quite handy. It can help to eliminate any sort of button on the player other than a simple on-off and a few other basic functions, placing everything else, instead, on a touchscreen display that a user can simply touch and then task. The operating system and the software in the player will take care of everything else.

For those considering going with an upgrade to a vehicle manufacturer’s sound system in a car, one of these new car DVD players can make for a great aftermarket accessory. They are relatively affordable and can add a great deal to most any vehicle, making long trips and short trips alike more pleasant and even fun.

[Different Models of Car DVD Players](#)

Vacationing can be a lot of fun but some of them are going to require a lot of driving or riding in a vehicle. Children can get bored and some of them will get

into trouble because of it. A car DVD player can keep their mind busy and keep them out of mischief which will make the trip much better for everyone.

There are different ones that people can choose from. Some of them are a part of the vehicle while others are aftermarket ones that can be moved from one vehicle to another because they fasten to the back of the seat. This is something that will be beneficial for the children and the parents.

Having an item like this can make the trip easier on everyone. A child does not always understand that it can take a while to get from one place to another. They will get impatient because they want to have fun.

Watching movies is going to be great entertainment for them. There are many different movies that they can watch. Using something like this is not going to create a lot of extra bulk to take with them.

Games that are meant for traveling can take up a lot of space and many of them do not provide a couple of hours of entertainment in one setting like a movie will. Some require the person to keep track of many tiny pieces too. Some of the DVD players are equipment with a place to plug in a game system too.

Most of them can be placed so that all of the passengers in the back of the vehicle are able to see the screen. Others will have two screens so that everyone can see the same movie. There are many differences between one model and the next.

Headphones or ear buds can be worn while using these so that it is not disturbing to people who are not watching the movie. Other passengers can listen to the radio, sleep or just have silence. There are several things that people use to keep themselves entertained.

Figuring out the best movies is usually the most difficult part of using something like this. These are easily plugged into the vehicle for power. Some vehicles have spots in the front and the back of the vehicle that have these. This prevents having to run the wires from one end of the vehicle to the other end.

There are adapters that can be purchased to go along with these as well. Every vehicle provides different options because of the different placement and sizes of the interior structures. Some people will drive a van while other people are going to be driving a small car.

The sizes of the screens of these can vary as well. Some will have a small screen while others are going to have something that is a little bit bigger. There are many reasons why people are looking for certain models of them.

Everyone can be entertained while they are waiting to get to the next destination. Ones that are not fastened into the vehicle will be able to be taken into the hotel rooms also. This gives a person many options for watching a movie.

Children have many different movies that are their favorites. They can pick out a few movies to take along with them on their trip. The number of movies that gets taken will depend on how long the trip is and how many times somebody wants to watch a movie over and over.

There are many different models of [car DVD players](#). Each one of them will have different features that people are looking for. Not every customer is going to be looking for the same options. There are many brands and models that are going to be popular because everyone has a different opinion about what is the best when it comes to electronics.

Whether someone is driving to work or driving around town, it is nice to be able to listen to music with a good quality sound system. Many other [car accessories](#), like remote starts and alarms can also be beneficial. Visit <http://ift.tt/29FCw1m> today and find a great deal on all of these products for your vehicle.

[7 Factors You Need To Consider Before You Buy A Car DVD Player](#)

If you're shopping around for a car DVD player, you will find a checklist to be an immensely useful tool to have on hand. From going over the kinds of in-car DVD player you want to identifying all the components and accessories that come bundled with the package, you'll have a much easier time getting exactly what you want for your car DVD player:

Type of [Car DVD Player](#). In-dash DVD players, rear-mirror DVD players, [headrest DVD players](#), portable DVD players – there are a lot of options out on the market. Identify which one will best suit your in-car viewing needs.

Smart Options – you can pay a little extra cash to pick car DVD players with smart capabilities, such as an [Android Car DVD Player](#). These mini PCs allow you to do so much more than just watch movies, like install apps or play games. They will cost more than their ‘dumb’ counterparts though.

Internal/External Storage Options – while the primary purpose of car DVD players is to play DVDs, you can also pick models that can play movies from USB flash drives or SD cards. Some players can even store the movies in internal storage – letting you play movies even when you don't have your library of DVDs with you.

Quad-core Cortex A7 Processor

It is the latest Quad-core 1.6GHz, support built-in WIFI, the system performance has been improved to unprecedented quick and accurate level.

- DDR3 1GB RAM
- CPU 4-Core
- 16GB ROM

Media Format. .AVI, .MPEG, .MP4, .MKV – check beforehand the

media formats that your in-car DVD player can play. This is especially important when choosing players that will work with storage media besides DVDs. This is less of a problem with smart players though, as you can just install the proper codecs to ensure that it can play whatever media format you have in mind.

Power Source. Identify where your player will draw its power from. The cigarette lighter receptacle, power cables from the dash, or cables connected directly to the car's battery are the most common power sources. Bonus points for DVD players with batteries, as they can run even while the car is turned off.

Connectivity. Some car DVD players have audio jacks that let you plug in headphones or earphones. Others have Bluetooth that let you use a variety of wireless devices, such as headsets or game pad controllers. Taking note of the connectivity features will help you identify the devices that you can pair with the player.

Packaged Components. Wires, brackets, speakers, controllers, antennas, tuners, cleaning kits – you need to check what the package actually contains. This will help you better determine if the car DVD players come with the features you're looking for or if you'll need to spend extra procuring the accessories and components on your own.

Keep this checklist with you while shopping, and you'll be able to better understand what kind of car DVD player you've set your sights on!
