

Customer Review on Pumpkin 10.1 Inch HD Headrest Monitor Car DVD Player

I purchased two of the model [CH1003B headrest auto dvd player](#) for install in my '13 [BMW](#) X5. I did a lot of research and decided that this model would offer the best bang for my buck, as it offers a clean design with superb functionality a 1/10

the cost of an OE rear entertainment system.

What attracted me to the [Pumpkin](#) units is the ability to hardware the power source and make either screen the master screen for [DVD](#) playback. Also I like that there is an HDMI input so I'm able to use my Roku or Chromecast.

As I had 12V power in the center console, I hardwired the power source and hid the cables under the console. I also ran the cable behind the seat back trim to the monitors for a clean install. The [headrest monitors](#) come with the silver bezel installed but I think the black bezel is much more modern and attractive, so I switched.

My only complaint is that the sound could be louder out of the built in speakers. I would have preferred there to be Bluetooth connectivity to the vehicle's audio system, and the ability to play BluRay discs, but I cannot fault the model for not being capable of such as I'm sure those features are available at a much higher cost.

I like the built in FM modulation so the sound can come out of the vehicle's sound system. I think the picture quality is superb for the price. All in all, I'd certainly recommend this headrest monitor dvd player.
