► Material/quality/appearance/processing

The processing of the [Pumpkin](#) radio is very high quality, you notice this immediately when you unpack it.The radio has a matte black finish. The knobs and buttons are very stable, feel comfortable and have a good press point.The silver chrome accents look unique.Once turn on the radio, you'll be convinced by the great 7-inch display with the nice tidy homescreen.

Through the touch screen in combination with the 'real' buttons,the radio is really a perfect device, you can control without direct viewing. You can change the home button color in the system.

► Technical data

The radio has a quad-core (cortex A9 Sofia3GR) with 1.6 GHz, 2GB DDR3 RAM and the internal memory is 16 GB.With this data, the Android 5.1 system running fluidly and without problems. You can install and play current games on the radio.

The radio supports GPS (preloaded with the Google maps APP), Bluetooth, steering wheel remote control, Wi-Fi, 3 G, FM, am, RDS, OBD2

► GPS

Through the supplied GPS antenna,the navigation runs very well.The site search takes just a few seconds after switching on and is extremely accurate. I have experienced no GPS dropouts. Together with the Google Maps app, the navigation is super easy to adjust because it works like the route planner

on the PC or on the phone.

The radio has a TF card reader. This reads standard micro SD card which is used for the extension of the store. (E.g. maps for different countries)

► FM Radio

The radio works fine, it is easy to use. You can save 5 radio stations on the quick selection box and many more on the detailed program page.

In particular, I find that you can control the volume via the buttons. So you can look the radio even without use. This is definitely a plus point of this radio model

► Sound quality

The radio impresses me not only with its easy operation, but also by a super sound.The radio has 4 audio outputs with each "real" 50 watt.The heights are very clear and the basses have a rich sound.

► Bluetooth

The Bluetooth connection is initialized in a few seconds the first time. Each additional time you have to do nothing more.The phone will connect automatically when it is in range of the car. This is very handy, then the radio has a

speakerphone and it is activated directly when it is connected via Bluetooth.
You will never lose a thought if you get a call in the car, whether you take the phone in your hand or used or the headset.

► Wifi, Wlan, 3G
The radio convinces with extremely many high-end features. So, as a Wi-Fi access inside the car radio can build up. Friends and family can connect to it and thus surf the Internet over 3G.

► Operating system
The OS is [Android 5.1](#) lollipop. Overall the UI is very easy.You can choose between two surface design. Personalize you can the radio of course, E.g. with an own background image.

Of course, that you can install using the APKInstaller normal APPs from the store of the play on the radio is a highlight of the radio.There are no limits: games/games, other navigation apps or speed camera apps are only a small part of the practical application for the radio.

My Special favorite app is the app with voice control. As a result, you can enable the Google search when driving or start also a navigation.

► Suitable Cars
The radio has a 2 DIN standard form and thus fits in much cars.

► Conclusion

Overall, the price/performance ratio of this radio is not to beat. He keeps everything he promises and can be controlled touch screen through the incredibly easy. He has extremely many features that were described above.
