

Customer Review on Pumpkin Android 5.1 Car DVD GPS 2 Din-RQ0268E

With an ISO adapter for my old car this [Pumpkin android car dvd gps](#) was quick and easy to fit. It works well, including the [DAB](#) add on – though the DAB app is a bit clunky. All other apps are good, and it has access to the Play store so

you can download your favourite apps. This came with Google Maps – which is my preferred nav app, and once connect via a wifi hotspot from my phone worked great with traffic updates. The [rear camera](#) functionality is good to – though the camera is a bit bulky – but the picture is fine. Fitted easily in my double din aperture – note you do not need to fit the bezel which is included in the dimensions given. Sound quality is good, DAB noticeably better than FM. I'm extremely happy.

It's only been 24 hours since I have installed this [android 5.1](#) head unit but so far so good. Extremely impressed with this item as it seems the company is eager to please based on the literature that is provided with the unit itself. Relatively easy hookup, awesome and great response from the touch screen. Although I have not had a chance to dive deep into the functions of this unit. Up to this point I have no complaints. The rear view camera quality is not the best but it does work descent during day time hours. Unfortunately I had recieved a different unit prior to receiving this one from another seller, complete piece of junk so to have no issues with this one is quite a relief. For the price this unit definitely has satisfied my needs.
