

Customer Review on Pumpkin Android 5.1 Double Din Autoradio GPS DVD Player-- RQ0264

Husband is happy with this purchase!!!

My husband bought this [android 5.1 autoradio gps dvd](#) for his Nissan Versa. It was a perfect fit for his car. This is his first Android head unit, and this [andorid 5.1 car stereo](#) works

better than the windows based unit that he had before. App's are easier to use; easy to download. This [double din head unit](#) has wifi and allows him to connect to our home wifi for downloading and updating. Installation was straight forward. The instructions were clean in the book that came with it. He had no difficulty putting this in his car at all. You will need to have the correct wiring harness in your car in order to put this [android car dvd player](#) into your car. It has excellent sound quality, both from the radio and the SD card music. It plays video as well. There were no problems noted in the video. The only problem in the sound area in there is a differential between the volume of the radio and digital music. The touch screen works well and is very responsive. The [back-up camera](#) works well also. He likes the fact that it mutes the music when you are backing up so as to not have distractions. The GPS works very well and uses Google maps. The unit has logo for many automobile manufacturers that you can choose from as a startup screen. This gives it a touch of class. My husband is very pleased with this purchase. I received this at a discount in exchange for an honest review.

I am very happy with this radio in my motorhome.

I had to purchase a bracket mount and enlarge the opening. I also used a wiring harness adapter rather than cutting and splicing existing wires. Existing speaker cables plugged in without modification.

I quickly filled the internal storage with apps and associated data. Thankfully, I was able to find an app that extends to the SD card. (I don't have the app name handy right now.) The touch screen reacts quickly, however, a little slower after extending internal storage to the SD card. I plan to move more frequently-used apps back.

The navigation app is OK if you need to be offline while

traveling, but i prefer the Google Nav integration with my other devices and Waze announcements of hazards and such. The AM/FM radio receiver is not good, but I don't listen to those frequencies that much. Extremely easy to root, just enter the special admin password and root access persists through power cycle.
