

Customer Review on Pumpkin Windows CE 6.0 Universal 2 Din Car DVD GPS Navigation- W0237

Great product, if you understand how to install stereo equipment. It does not come with instructions but the [Pumpkin](#) customer service is outstanding and can help you out with the install. When you contact them they get back with you right a way and they are very professional. For those who have never installed a [camera](#) on a double din radio. I believe it will depend on the vehicle which you are installing it on but after running the aux cables for the camera, I had to run an additional wire to the reverse lights in order for the camera to come on automatic which is not a big deal. As for the stereo itself, the touch screen is smooth as it transitions

between programs and the bluetooth works great.

First, about the delivery: the shipment was really FAST! The seller delivered it by DHL and it arrived within a week! The quality of the car DVD GPS Navigation unit seems to be very good. I haven't had any glitches or other issues with the operation of the unit.

The package includes a [car DVD player](#), plastic frame, power cable, USB cable, SW-control wire, external mic, GPS antenna, 8GB map card, and user manual. Instructions manual is not good, just little info on it but I can do it myself.

GPS is great, and all the features work as advertised, and the GPS signal is strong and locks on quickly.

The Bluetooth is outstanding. I've been very impressed with the Bluetooth functionality.

The screen resolution is good, and the radio has good reception.

I have to say customer service is so good! I had a few scruples at first, and the seller was very prompt in replying to my question. Thanks so much!
