## <u>How to Install an Android Car</u> <u>Stereo</u>

First, turn off the electricity to the machine by removing the live battery wire from its station. After disconnecting the b attery, you'll need to take off the trim boards enveloping you r <u>car stereo</u>. Each car just a tiny bit unique here.

Next, you need to dispatch the previous head unit directly out until the wires connected to the back are accessible. Unplug the cord, discharge the cabling harness and proceed to remove the antenna cable by unscrewing it. The cabling harness is the structural fastener that integrates all of the cabling for th e sound system into an individual connection. The new head uni <u>t</u> you have purchased should have included an adapter that matc hed the factory installed cabling. The end of the cabling on t he end, should have four to eight colored wires coming from th e back. There should be two such wires that plug to each speak er; one positive one negative. Most negatives are shown with a black stripe while positives are generally either solids or h ave a white stripe.

If your new <u>car DVD player</u> does not come with an adapter that works with the harness in the dash, you need to purchase a cab ling harness kit. The new harness will have to be plugged into the new stereo. Match the colored wire to its match and put t hem together. After having the wires connected to their proper match, the stereo should be ready to install. Hold the system to the dash to plug the proper connections into the back. You can pause and test what you have done to make sure you have c orrectly pared the wires.

Once you find that everything is in order; proceed to carefull y push the unit all the way into the dash and replace the scre ws. After the stereo is mounted correctly, put the trim boards back up and reattach everything holding them in place. Finally, you got a new <u>Android stereo</u> for your car.
