

Customer Review for Pumpkin JY-C0662 Toyota 6.2 Inch HD Touchscreen 2 DIN Android Car Stereo

Here's my experience so far as I have only had [this unit \(JY-C0662\)](#) installed for a few days:

By **CoyoteAssassin**

Good

- **Very fast shipping**, I think it arrived in 4 days from China.
- **The build is very good and solid**. Buttons give good feel and the unit overall looks professional. Just remember this is not a top of the line Pioneer, Alpine etc, so don't get too picky... Let's just say I was pleasantly surprised.
- **Easy install**... It doesn't get much easier than this. The unit comes with the Toyota harness adapter and will plug directly into yours...Period. No bezel is required as mine fit the dash perfectly as if it was made by Toyota for the FJ cruiser. Only thing you'll need to do is to

either grind or flatten several centering dimples on the brackets as they don't have a place to sit on the HU. Took me 2 min with a ball-peen hammer a few love taps on the vice and voila. The factory HU uses 4 bolts per side but mine could "only" accommodate 3 per side... I hope it doesn't fall out! hahah

- **Back-lighting...**The description of the unit gives the impression that there are only a handful of colors to choose from, but I found that the color is infinitely adjustable and I was able to match the factory dash back-lighting with no problem.
- **It's Android...**So with an internet connection, you can connect to the **Google Play Store** and **download apps** to your heart's content. I would recommend replacing the stock launcher with something else... I am using Nova and it works much nicer and smoother. **The installed radio app, GPS (iGo), video player etc... all work good.**
- **Steering wheel controls** worked perfect... You just program them in the software settings.

Not so good/ But not so bad

- I lost the subwoofer functionality, but I think it's just a matter of connecting power to the correct wire...Pending..... Fixed!
- **Memory Card.** Recently installed a 32 GB micro SD card to hold my music, photos, videos, etc... 32 GB is the largest this system will accept, at least that is what they say.

Enjoy:

Radio

GPS Navigation

UI

RDS

Torque

**Customer Review for
Pumpkin LM-C0676 Toyota
Universal 6.2" Android 4.4
Double Din Car Stereo**

By **HalfPint**

Well, with all the help and advice I got brave enough to see what happened...***It's installed and all seems good.*** I have accessed the menu and set the **steering wheel control** OK and installed the **GPS** in the compass cluster. Was a little worried about that I'd break the dash panel, it put up more resistance than I expected, but I didn't.

The **mapping** works great (though haven't been anywhere yet, but locked on to the location really fast).

The OE brackets line up perfectly. And the unit fits the hole perfectly. It powers up with the **Toyota logo** straight off. It looks OE which is great.

I plugged three of the five connections out of the OE head into the back as shown earlier. The others don't seem to connect, one is to the Aux and we know that doesn't work, not sure about the other but it all functions with the exception of the iPod. I didn't connect any of the RCA's or other wires at this stage.

I plugged the **iPod** lead and the **USB** lead supplied direct into the unit ([LM-C0676](#)), but not sure whether the slots are different. Anyway, the iPod is connected (powered and shows on

iPod screen), but not communicating with the head unit.

Now I just need to learn how to use Android.

So here's the installation process:
