 Universal 6.2" Android 4.4 Double Din Car Stereo

## By HalfPint

Well, with all the help and advice I got brave enough to see what happened...It's installed and all seems good. I have accessed the menu and set the steering wheel control OK and installed the GPS in the compass cluster. Was a little worried about that I'd break the dash panel, it put up more resistance than I expected, but I didn't.

The mapping works great (though haven't been anywhere yet, but locked on to the location really fast).

The 0 E brackets line up perfectly. And the unit fits the hole perfectly. It powers up with the Toyota logo straight off. It looks 0 E which is great.

I plugged three of the five connections out of the $0 E$ head into the back as shown earlier. The others don't seem to
connect, one is to the Aux and we know that doesn't work, not sure about the other but it all functions withe the exception of the iPod. I didn't connect any of the RCA's or other wires at this stage.

I plugged the iPod lead and the USB lead supplied direct into the unit (LM-C0676), but not sure whether the slots are different. Anyway, the iPod is connected (powered and shows on iPod screen), but not communicating with the head unit.

Now I just need to learn how to use Android.

So here's the installation process:
