A New Way to Use the Bluetooth of a Car Head Unit

Music streaming is the most widely and frequently used Bluetooth function in the car that installs a multimedia

player. Many car radios support Bluetooth hands-free calling and phonebook accessing, which is very handy for driving. There are other unexpected ways to use the Bluetooth music sharing function especially when you are with an enamored companion.

Music really helps tremendously if you take a serious observation, you can definitely ask this friend out again if he/ she sings and even swings with every song in your favorite playlist. Likewise, ask the friend to play her playlist via Bluetooth is a genius idea to find out what type of person is this companion, if she/he likes hip-hop, while you prefer classical music, you may need to pay some attention to other aspects of your lifestyle differences before getting involved in this relationship too deep.

Who else could think to use the Bluetooth function of a car radio in such a romantic way? (:

How to Add Bluetooth to a Car

Most people spend a lot of their time on the road. If you're o ne of these people, upgrading your car's multimedia system can be one of your main priorities to make those long hours toler able. But having too many wires for your car's multimedia syst em can be bothersome and may even cause driving problems. One simple upgrade that you can do to eliminate this issue is by a dding a Bluetooth to your car.

Step 1: Purchase an aftermarket <u>Bluetooth car stereo</u>. Stock head units of newer car models already have Bluetooth capability. But if your car is a bit older, you can purchase these kinds of car radios for at least a hundred dollars from your local car parts store or the online store.

Step 2: Install the head unit. Aftermarket car stereos with B luetooth capability are designed just like any other head unit s. To install, simply remove your current car radio and discon nect all the wires behind it. Then, following the same wiring diagram or what is instructed in your new head unit's manual, connect the wires to the new radio and slide it back to the he ad unit bay.

Better yet, have the new car head unitinstalled by the store w here you purchased it from. If you got yours from a local stor e and not over the Internet, installation should also come wit h the price tag you paid.

Step 3: Connect your Bluetooth enabled device to your new car DVD player. Most head units have a quickaccess button on its panel that you can use to instantly enabl e its Bluetooth. Once it's switched on, you can start connecting your mobile devices like smartphones and MP3 players to you radio.
