- Support subwoofer audio output
- Support both 3G/WIFI connection
- Support steering wheel control function
- Support iPod/iPhone 4 audio input
- Support reversing camera

Language:

English Russian Spanish Turkish Portuguese Arabic Chinese Italian German French Thai Indonesian

SD card:

Other than that, I put a 64 GB SD card in it with a ton of music and pictures on it and it read it as easy as if it were a 1 GB card. If you place the MP3's in folders (band/album) then you have the folder name come up on the head unit and you can quickly browse through and find any particular song you want. You can even get it to list all the songs on the card and have it play the whole thing, although I could never listen to everything there while in my car. I believe (not certain yet) that there's a randomize or shuffle function, but I haven't had the time to try that yet. They state it will only access a 32 GB card, but I'm getting the full 64GB's I have in it. Maybe it has something to do with the type of card you're using? I bought one specifically for cameras and its read/write speeds (very fast) and it accesses the whole thing !

Bluetooth:

Bluetooth on this is seamless and works like a charm. Set it for the phone and as soon as the unit turns on again… bingo – it automatically connects if you've set it up for automatic connection.

Mic:

The internal mic is clear enough that other people can hear me and I have it set to auto answer incoming calls so I do not have to take my eyes off the road to get the phone to answer. Safety is the main concern. I value that over screening my calls while driving. The contacts list imported easily and calls made out are fine. I now need to incorporate voice commands to it and then try to find a text to speech app for texting… if that can even be done on this unit.

I easily would recommend this to friends and family without hesitation.

UPDATE:
This head unit is a tank. They sent me the KitKat update. I followed the instructions and it went through without a hitch. My buddy just bought a high dollar Pioneer and it can't do 1/4 of the stuff this one does. Do yourself a favor… if you're looking for a good android head unit, then you're in the right place. The people behind it, while a little poor with the english language – not so bad that I can't understand them – are quick to respond, very helpful and will answer any question you can throw at them. I would not hesitate to buy another head unit from them again.

The Review of Pumpkin KD-C0224 6.95" Android 4.4.4 Universal In Dash HD Touch

Screen Car DVD Player Double Din GPS Navigation Stereo

Below is one review of our customers on Amazon store Jason J German on March 31, 2015 for Pumpkin KD-C0224

“I love this radio. It installed easily into my 1999 Pontiac Trans Am. Since it’s basically an android tablet the music possibilities are almost endless. Shuttle, amazon player, Pandora, I Heart Radio, and others I’ve tried all work great. Wi-Fi tethering from my phone for the radio’s internet connection is a snap (I recommend the app ‘tasker’ to automate it).

The steering wheel controls were a little confusing to figure out but I finally got it to work after a little research.

With any product there are always annoyances. I don’t care for the stock player for usb or sdcard mp3 files. You can’t sort by artist with it but that’s okay because I use shuttle+ on it anyway. I also wish it had subwoofer level control as well in the equalizer. To remedy this, I downloaded the app ‘Equalizer’ on it to boost the bass to my subs and it worked great. With the ‘Equalizer’ app, the Pumpkin radio sounds

better than any aftermarket car stereo I've owned, and I've owned a ton of them.

Other then those two preferences of mine, I'd say this stereo is amazing!"
