

The Customer Review for Pumpkin 2 Din Universal Car DVD GPS Navigation Pure Android 4.4 kitkat Stereo Head Unit with 6.95 inch LCD HD Capacitive Touch Screen

Below is one of our customers review:

I purchase this for my Nissan 370z with the Bose system. This radio is fantastic. It took me a while to hook it up but managed to get everything to work. 'Steering wheel controls and backup camera all working'.

I suggest that you download and install Poweramp from Playstore. It is far superior to the built in player.

I am using Torque with a Bluetooth adapter and it works.

I read comments about the quality for the built in mic, but I find, even with my loud exhaust it is OK. It comes with an external Mic but I did not install it.

If you use the voice app on a Samsung phone you can even send a test message. You just need to have the Bluetooth screen active. You need to double tap the voice key on the phone to

activate.

I have the GPS sensor mounted under the dash by the glove box and it works Flawless. No need to have it on top of the dash, as long as there is no metal blocking the signal. I use HERE MAPS as it is the one I am use to.

I hope in the future they will have a radio that is Sirius\XM compatible.

Communication with AutoPumpkin has been great. They always responded to my questions

I will recommend this stereo and Pumpkin to other people.

How to slove to Pumpkin car stereo GPS does not work?

About GPS doesn't work, you need to check this.

Please check the GPS antenna connected very well.

Then, Open the settings and find GPS.

Click the location access.

Turn on this.

Customer Review of Pumpkin Universal Android 4.2 Car Stereo GS-C0219

Frist, thanks the reviewer Daniel Farrar from Australia. The product he reviewed is <http://www.autopumpkin.com/pure-android-4-2-twin-din-universal-car-dvd-gps-navigation-with-6-2-inch-lcd-hd-capacitive-touch-screen-3g-wifi-bluetooth-support-obd2.html> Here are what he said:

The Pumpkin is great. I love it. It is packed full of features and the fact that it is Android is good as it allows so many options regarding applications. Price is good! A high end brand name unit with GPS starts at over \$1000 here in Australia and its other features are not as good as the Pumpkin. The Pumpkin unit is heaps better and less than half the price!

There are a few improvements that I would suggest;

1- More detail in the installation instructions...I had to use google a bit to work out what all the plugs and and ports were for. I also emailed your company regarding a couple of questions I had. The wiring diagram that it came with was poor quality and hard to read.

I did work it all out. It took me about 6 hours to install including the reversing camera.

2-It would be great if the DVBT TV was High Definition.

3-it had a few glitches and crashed a couple of times when I first used it. The sound would also stop and start. I gave it a factory reset using the hardware reset button and it has been perfect ever since.

4-The blue tooth hands free for making phone calls picks up a lot of the background noise (more than my old unit). I have tried an external mic but it didn't make much difference. Is

there any way to adjust the mic sensitivity of the unit so it doesn't pick up as much background noise?

Over all I am very happy with the unit and your service. I would give it an 8 out of 10. If the blue tooth phone was a bit clearer and it had HD DVBT instead of SD DVBT I would give it a 9.5 out of 10.

I could do a video review if you like.

Cheers

Daniel
