

Customer Review on Pumpkin Android 5.1 7 Inch Car GPS DVD Player Stereo for BMW 3 Series E46/M3

The [Pumpkin BMW](#) dvd gps car radio was delivered very quickly. The scope of supply is very extensive. The multimedia player is with 7 inch multi touch screen, all connection cables with can bus adapter, a remote control, a double USB cable of a microphone and a detailed manual in German

Appearance-Processing Technology

The device has a 7 inch touchscreen of 17.78 cm which is protected with a protective film, the film will be removed after installation, the mount along with the buttons and control knobs are made of high quality plastics. The device has a micro SD and GPS card for memory expansion and the map card input is up to 32 GB, It can be connected to a Smartphone via mirror link directly. The processing is absolutely high quality and perfectly. The CPU of the Android 5.1 Operating system is PX3 Cortex A9 Quad Core 1.6GHz, the memory is a DDR3 RAM 1 GB, the internal memory is 16 GB, the screen resolution is 800 x 480, the output power: Max 4x50W.

Start Up

The device needs approx. 15 seconds to boot up. You can extend the standby mode up to 5 hours, so that the device directly turns on after running in this period of time . I have the mode on 30 minutes.

Sound

I've installed front and rear high quality 2-way audio system. The sound in combination with the 4 x 50 watts of the amps very good. I'm fully satisfied.

Android

The [Android 5.1](#) system runs in conjunction with the quad core processor absolutely smooth without juddering, therefore you can download any app in the [Android](#) platform from Player Store and you can delete apps if you like.

Media Player-DVD

- > Very good equalizer with very good sound quality
- >Precise sound customization through user Setup possibility.
- > Many setting possibilities
- >Random play, playback of all or individual titles possible
- >Titles are represented with ID3 tag display
- >Clear folder structure
- > The player plays all known music and video formats
- > Das DVD Laufwerk spielt Regionsunabhängig alle DVD'S ab

Navigation

I can download any navigation app from play store and get off-line maps.You can also use google map if you have access to Internet via 3G or WIFI.

light

The light turns on automatically and dim automatically, the light color fits perfectly to the instrument lighting from E 46 and is also customizable.

Special features

There is a custom menu in which hide functions can be activated here you must enter the password 126, It can read and set different wallpapers in 3D. I've adjusted the black hole, This looks very nice. The w LAN reception can is good.

Conclusion

This multimedia system has left a very good impression on me.

It enhances the cockpit of the E46 a lot, the materials used are of very high quality and processing is perfectly, all functions can be operated easily and quickly. The system is mature, It looks exactly like the original BMW Navi, the technology brings my BMW Multimedia back up to date. And at this price, I fully recommend it.

# Customer Review on Pumpkin 7" Flush Panel Android 5.1 Lollipop Car Stereo-RQ0276E

Here is my review of this [Pumpkin](#) 7 inch touchscreen [android 5.1](#) lollipop car stereo from [AutoPumpkin](#).

The android car stereo comes safely packaged in a retail box.

Inside the box

- \* 1 x 7 inch touchscreen android 5.1 double din head unit

- \* 1 x fascia surround

- \* 1 x wiring harness

- \* 1 x AV/phono/amplifier harness

- \* 1 x gps aerial

- \* 1 x double USB and 3.5mm line in harness

- \* 1 x wired mic for mounting to dashboard

- \* 1 x welcome card and instruction booklet

I've wanted to try one of these [android](#) car stereos for quite a while and I was pleased to be kindly offered the chance to review this one at a discount by the seller.

The head unit comes with protective film over the touchscreen to prevent scratches in transit and included in the box is

pretty much all you need to fit the stereo in your vehicle except obviously the vehicle specific surround which varies widely car to car.

I wanted to swap this car stereo with one I fitted last year to my 2007 Ford Focus(a specific double din facial frame needed,I have not ordered one), a pioneer CarPlay touchscreen head unit.

I wasn't using the CarPlay function at all and decided to give the android system a go, as there's so much more you can customise and do with it.

The harness included has ISO connectors and fitted into the adapter harness that I had used with the pioneer head unit.

The harness cables all plug into the back of the android head unit in their specific ports. Apart from the fact that I had to damage the surround getting the pioneer unit out (don't ask) I plugged the android unit in and was able to get it powered up and working in no time at all.

I was pretty blown away by the functions of this stereo, built in wifi, access to the Google play store and all the associated apps, there's so much potential with these units.

I wanted to get the steering wheel controls working and theres not much info in the manual other than there's two wires, that need to be connected to a analog resistive steering wheel control unit.

I watched a video on YouTube and someone on there showed that you connect the two wires to the steering wheel adapter that I had previously purchased for the pioneer stereo, it has a

small jack similar to a headphone jack and what I did was strip back the insulation on each wire about an inch and carefully wrapped them round the first and the last contacts of the jack taping them carefully with insulation tape so as to not short them out on each other. I didn't use the middle contact on the jack.

I opened up the app which allows you to assign different functions to the steering wheel controls of your car, and to my surprise the Ford Focus's steering controls worked! I could use the skip track, volume and mode buttons and you can set each button to do whatever function you like. Awesome!

So I downloaded the Spotify app and before I knew it I was downloading tracks to the head unit just like you can to your phone!

The touchscreen of the [android](#) unit is very responsive and the resolution of the screen is really very good, with good colour and crisp looking graphics.

The stereo is capable of receiving DAB signal with a module that can be purchased separately, and also a 3G dongle can be fitted so you can connect to the Internet and check emails, browse the web, virtually anything you can think of, all from the stereo.

I used my iPhone's wifi hotspot connection to get the stereo connected to the Internet, although I haven't managed to get it to auto connect when the stereo powers on.

The stereo has Bluetooth connection as well and I streamed music from my iPad and iPhone all without issue and with good sound exactly the same as the pioneer unit.

The head unit has a 4 x 50w output for the speakers and the sound quality of the unit is as good as, if not slightly better than the pioneer. The Ford Focus factory speakers are very good with a decent bass and this was all pretty much the same as the pioneer unit. I found that the door mounted speakers seemed to be working with this android unit and for some unknown reason they didn't with the pioneer unit this android one replaced.

The build quality of the stereo is very good, and the sound quality equally so.

Overall I feel I have only scratched the surface of what you can do with this unit but here are some of the pros and cons I've found so far –

## PRO'S

- \* Responsive 7 inch touchscreen
- \* Good quality sound
- \* Good build quality
- \* Possibility of receiving DAB signal

- \* All the benefits of the android lollipop OS

- \* Access to google play store

- \* Built in wifi

- \* 3G connection with optional [dongle](#)

- \* [Reversing camera](#)/dash camera inputs

- \* AV output for headrest mounted rear screens

- \* Bluetooth connectivity

- \* USB/SD playback of music and video

- \* GPS navigation with optional map SD card

And many more!

## CON'S

- \* Very reflective screen

- \* Not much info on steering wheel control setup

\* Does take 25 – 30 seconds to boot from “cold”

So far I'm really impressed with the performance, sound and functions of the head unit.

I will update my review after a couple of months to see how things are going after I work out more of what's possible with the unit.

Highly recommend this stereo, a big step forward from the dated user interface on the pioneer, which was £150 more.

Thanks for reading my review.

PS: To install this universal car stereo in my 2007 [Ford Focus](#), it needs a 2007 Ford Focus double din facial frame which I have not ordered yet.

# Customer Review on Pumpkin Android 5.1 Car DVD GPS for Opel-RQ0422E

I was looking for a new replacement [android](#) car dvd for my CD30MP3, in particular I wanted the in-car navigation and more function on music, such as YouTube and Spotify. My car is [Opel](#) Corsa D 2012 Facelift.

After finally a new version [Pumpkin Android 5.1](#) device has been released, I got slammed. The delivery is fast, packaging is good and solid, the operating instruction and note with support contact information are also included.

Installation is really self explanatory, in addition the guidance tips are also available.

The only confuse is that how I should put all the cables together, and the radio also protrudes a few millimeters, so I have to do some work on the plastic strip behind the radio. I have also attached the GPS antenna and the 3G stick above the glove compartment.

Processing of the radio is very good, no dust behind the screen, solid workmanship, good pressure points, super gap. I have tested all the functions, everything works fine. Only I have to get used to the equalizer settings of default MediaPlayers, VLC Player from the store works and beautifully. Spotify works great, with Wi-Fi and the [3G stick](#) (must be ordered separately).

GPS position data shows immediately, the radio runs smoothly without hitch, until now no hanger or similar issue.

[Rear view camera](#) (must be ordered separately) to work immediately, radio boot about 10 seconds, but not annoying.

Also the steering wheel remote control and the display work top in combination with the radio.
