

Customer Review on Pumpkin 10.1 Inch HD Headrest Monitor Car DVD Player

I purchased two of the model [CH1003B headrest auto dvd player](#) for install in my '13 [BMW](#) X5. I did a lot of research and decided that this model would offer the best bang for my buck, as it offers a clean design with superb functionality a 1/10

the cost of an OE rear entertainment system.

What attracted me to the [Pumpkin](#) units is the ability to hardware the power source and make either screen the master screen for [DVD](#) playback. Also I like that there is an HDMI input so I'm able to use my Roku or Chromecast.

As I had 12V power in the center console, I hardwired the power source and hid the cables under the console. I also ran the cable behind the seat back trim to the monitors for a clean install. The [headrest monitors](#) come with the silver bezel installed but I think the black bezel is much more modern and attractive, so I switched.

My only complaint is that the sound could be louder out of the built in speakers. I would have preferred there to be Bluetooth connectivity to the vehicle's audio system, and the ability to play BluRay discs, but I cannot fault the model for not being capable of such as I'm sure those features are available at a much higher cost.

I like the built in FM modulation so the sound can come out of the vehicle's sound system. I think the picture quality is superb for the price. All in all, I'd certainly recommend this headrest monitor dvd player.

How to Fix When Wifi Issues Happen to Android Car GPS Radio

Normally our [android head units](#) have the built in WiFi, you can open it to search the surrounding WiFi signal and have access to the internet. After using [Pumpkin](#) Android Car GPS Radio for quite a while, some customers may have some issues to the built-in wifi.

If it really happens, please follow the corresponding suggestions to check and solve the issue.

1. The built in WiFi could be opened and connected, but the WiFi signal is poor or sometime the connection breaks. This may have relation with the WiFi source you connected, please check if the WiFi router to the car distance is at the range of 3-5m.

If the car gps dvd player you bought have the [android 4.4](#) system, you can go to the Settings-WiFi to turn on the "Avoid poor connections" and "WiFi optimisation".

Sorry that the factory delete this settings on the new released [android 5.1](#) system.

And actually you can share the WiFi hotspot from your smartphone, then our unit can also connect to the internet via your WiFi hotspot.

There is a way shared from one of our clients, maybe it's not suitable for all of you who have the first kind WiFi problem, but you can have a try.

"Just used an typical WiFi antenna from an old router and brazed it on same point as the old antenna was. I did not remove the old antenna just added a second one on the old antenna output, works really good."

2. After used for a period of time, the WiFi could not be opened, but the USB port works.

It's the built in WiFi module defective or broken, you can buy a WiFi dongle to receive WiFi signal and connect to the internet.

Here is the link of the WiFi dongle for your reference.

<http://ift.tt/2crhBh3>

And you can refer the below video to use the WiFi dongle.

3. Neither the built in WiFi could be opened nor the USB port could be used any more.

It's the built in WiFi/USB switch module on the mainboard defective or broken, you can return it back to us for repair or exchange.

Here are two attached picture for you to check the USB port problem.

Any question, please email your order number and question details to Pumpkin support team(andy-pumpkin@hotmail.com).

Customer Review on Pumpkin Android 5.1 Car DVD GPS 2 Din-RQ0268E

With an ISO adapter for my old car this [Pumpkin android car dvd gps](#) was quick and easy to fit. It works well, including the [DAB](#) add on – though the DAB app is a bit clunky. All other apps are good, and it has access to the Play store so

you can download your favourite apps. This came with Google Maps – which is my preferred nav app, and once connect via a wifi hotspot from my phone worked great with traffic updates. The [rear camera](#) functionality is good to – though the camera is a bit bulky – but the picture is fine. Fitted easily in my double din aperture – note you do not need to fit the bezel which is included in the dimensions given. Sound quality is good, DAB noticeably better than FM. I'm extremely happy.

–by Dylan

It's only been 24 hours since I have installed this [android 5.1](#) head unit but so far so good. Extremely impressed with this item as it seems the company is eager to please based on the literature that is provided with the unit itself. Relatively easy hookup, awesome and great response from the touch screen. Although I have not had a chance to dive deep into the functions of this unit. Up to this point I have no complaints. The rear view camera quality is not the best but it does work descent during day time hours. Unfortunately I had recieved a different unit prior to receiving this one from another seller, complete piece of junk so to have no issues with this one is quite a relief. For the price this unit definitely has satisfied my needs.
