## How to Add Bluetooth to a Car

Most people spend a lot of their time on the road. If you're o ne of these people, upgrading your car's multimedia system can be one of your main priorities to make those long hours toler able. But having too many wires for your car's multimedia syst em can be bothersome and may even cause driving problems. One simple upgrade that you can do to eliminate this issue is by a dding a Bluetooth to your car.

**Step 1**: Purchase an aftermarket <u>Bluetooth car stereo</u>. Stock head units of newer car models already have Bluetooth capability. But if your car is a bit older, you can purchase these kinds of car radios for at least a hundred dollars from your local car parts store or the online store.

Step 2: Install the head unit. Aftermarket car stereos with B luetooth capability are designed just like any other head unit s. To install, simply remove your current car radio and disconnect all the wires behind it. Then, following the same wiring diagram or what is instructed in your new head unit's manual,

connect the wires to the new radio and slide it back to the he ad unit bay.

Better yet, have the new car head unitinstalled by the store w here you purchased it from. If you got yours from a local stor e and not over the Internet, installation should also come wit h the price tag you paid.

Step 3: Connect your Bluetooth enabled device to your new car DVD player. Most head units have a quick-access button on its panel that you can use to instantly enable its Bluetooth. Once it's switched on, you can start connecting your mobile devices like smartphones and MP3 players to you radio.

## <u>How Bluetooth Car Stereos</u> <u>Work</u>

by Jessika Toothman

Bluetooth car stereos are commonly integrated with Bluetooth-enabled cell phones, and when the two devices are within range of each other, they can communicate in a number of interesting ways. Depending on the particular models in use, it may be possible to make and receive calls without even pulling out your phone or pushing a single button. You can even hear the call sthrough the vehicle's speakers. Other models may require a few

pushes, but usually with more ease than plodding through cell phone menus. You may also be able to view other information su ch as the phonebook, incoming calls and call status on the ste reo panel. When the phone rings, the speakers will automatical ly turn down the volume on any music or movies that are playin g while you chat on the phone and resume when the call is over

Some <u>Bluetooth car stereos</u> can store your phone's entire addre ss book and other contact information; others have built-

in phones which copy all the information off your phone's SIM card and take over the functions for calling. Your cell phone is disconnected from the piconet, not only saving its battery power but also providing a stronger connection.

These innovations come almost as much out of necessity as convenience — at least for people who can't stand being in the car without making a quick phone call. Many places now enforce laws limiting the use of cell phones while driving, and Bluetoot h car stereos are one way to bridge the middle ground.

Besides augmenting your ability to connect with the outside wo rld through phone calls, Bluetooth car stereos can also enhanc e the environment inside a vehicle. Transmitters can be used t o stream music from iPods, MP3 players and satellite radio str aight into the stereo without creating a mess of tangled cords Some car stereos can display video o n fullcolor LCD displays, although this usually isn't an option when the car is moving. If you have some passengers in the back wh o could use a movie to settle down, lots of Bluetoothenabled Android car stereos also come with the hookups needed to turn your vehicle into a mobile entertainment center. Conne ctions for other devices like GPS navigators and USB flash dri ves are among other common fixtures.

And with each passing year, the technology grows and evolves. Comparing Bluetooth-enabled car stereos to cassette-enabled car stereos already seems like a throwback to the Midd le Ages, so who knows what the future has in store.
