Hi, can anyone help with my issue. I was having an issue with my 11-RQ1130E+Y0811 unit double booting so was advised by the supplier to update the unit following a link he sent. I followed all instructions to the letter, however the units resolution has now changed and only covers 2/3 or more of the screen now. My question is, Is there a specific 800×480 firmware update?

Thanks in advance for any help?

Ηi,

Sorry for the late reply due to the National Day. Could you please first tell us what kind firmware you got? You can try to download the high resolution firmware to check. Here is the link for you.

<u>General Configuration • Re:</u> RQ0269E-UK-A

Ηi,

Sorry for the late reply due to the National Day.

1. please check if the red and yellow wire pin position are right to your original cable, you can refer another forum.

viewtopic.php?f=3&t=19

- 2. Could you please tell us what blank screens you added? Just attach some picture.
- 3. This unit support to play music via bluetooth. You need to open the music player and enter the bluetooth music, then it will play.
- 4. Please go to the Settings—about device to find the firmware version.
- 5. The unit does not have the git repo for development.
- 6. Currently we don't have the android 6.0 firmware for this kind unit.

Regards

Ηi,

Sorry for the late reply due to the National Day.

The factory technician said, if you just flash the ROM and make the unit back to Android 4.4, after flash back to Android 5.1, it could not make the hardware key mixed. The only possible situation is that you also flash other mcu file.

Please tell us what kind of the mcu version on your unit.

Once we get the MTCB-KLD 4-V2.94 mcu file next Monday, we will send it to you.

Regards
