

# Want to Watch Netflix in Your Car During Travel | Know These Steps

Are you planning to go on a long drive and want to enjoy your travel? Nothing can be more fun than watching trending series or movies in your car. Netflix provides a wide range of streaming services and helps us stay connected with the television using thousands of devices through the internet. Enthusiasts can watch their favourite shows while travelling in the car. When we talk about watching Netflix, we don't mean say watching online shows on your phone, but on a wide screen in your car.

Though, there are several streaming devices that can help you watch Netflix content at anytime and anywhere, even while

commuting. You can use any internet or data connected device that has the Netflix app including consoles, smart TVs, set-top boxes, car stereo's [head unit](#), tablets and smartphones.

In this guide, we've covered all the steps that can effortlessly make your Netflix app work in your car stereo.

## **Step No. 1: Connect a Car Stereo That is Mirror-Link Compatible**

The first thing you require in a car multimedia is its mirror-like compatibility. With very little effort, you will be able to watch Netflix on the type of head units that can be mirrored. However, you will require a few cables and other connectivity devices. If you are a professional in linking devices, you will be able to activate Netflix hassle-free in your car. All you need to do is appropriate settings by mirroring your device with the [player](#).

## Step No. 2: Mirror-Link Compatible Phone or Tablet Having Android 7 & 8

Secondly, you must have a phone or tablet that supports Mirror-linking. Your device must be Android 7 or 8. Such phones or devices are compatible to watch Netflix in the car. With just a few more steps, you will be able to view your favourite television, movies, series and video content of your choice.

## Step No. 3: App-Installed on Phone or Tablet Having an Active Netflix Account

The next step is installing the app on your phone or tablet. Once it is done, make a Netflix account and remain active on it until you are done watching your favourite shows. For this purpose, you require a device that can work the videos out. Usually, the car stereos have standard RCA input videos. They are in red, white, and yellow connectors. And you need to hook your phone and tablet to some connectors, depending on the device.

## **Step No. 4: Auto-Floating Apps**

The auto-floating apps are for cars that come with all features so that they can be used in the vehicles through only phones. A standard app usually breaks the mirror-link connection or shows the app only on the phone's screen and not on the connected car radio or infotainment, but these floating apps can make your lives easier while multi-tasking on your Android phone. When the app is on your phone, you will be able to connect to Netflix to watch content.

## **Step No. 5: Active Free-Form Type Mode & Mirror-Link Expert**

Once installation of the required floating app is done, you need to activate the free-form style. Additionally, find the Mirror-Link professionals in case you face connectivity issues. Several subscribers of Netflix pay to get the contents and DVDs for this purpose. Netflix offers three different offers for its viewers, depending on the content's streaming quality. So, choose the one that seems most appropriate to you.

## **Step No. 6: Upgraded Mirror Drive Model**

Upgrade your mirror drive model to prepare and watch your Netflix shows. There are several options to choose the drive model including Google, Chinese, LG, and other brands. Upon selecting the most appropriate one, you will be able to connect your tablet to the data connection by using the suitable app. This will help link with the Wi-Fi hotspot for Netflix. Stream your favourite show and enjoy your travel throughout.

# Buy Double Din Car Stereo to Watch Netflix

A double din car stereo is packed with the latest technologies and includes classy upgrades for your car's audio system. Having exceptional audio and visuals, these double dins feature great navigation, communication, entertainment and much more. From Bluetooth connectivity, hands-free control, enhanced sound quality, to multiple media connections, a double din car stereo can make your rides more enjoyable.

In addition to the double din, purchase from the widest range of [branded head units](#), [DVD players](#), to [car accessories](#) options. If you are planning your next road trip, follow the aforementioned steps and watch Netflix to ensure a pleasant journey.

# Car stereo reviews: the best double-DIN head units 2021

Android 10

RAM  
4GB

ROM  
64GB

I've been running a pretty custom PT Cruiser for several years now with a cheap Android Double DIN unit, and the touch display was truly atrocious. In a fit of rage with ghost touches I slapped the screen too hard and shattered it, so had to buy a new unit. Did a little looking, and [the pumpkin android 10 head unit](#) seemed to fit the bill perfectly so I went ahead and ordered it around 1:30am. Arrived at 3pm NEXT DAY.

Took out the old unit, removed the old wiring harness and wired this one in. Install took approx 90mins as I am pretty thorough, I soldered all the connections to the Metra harness for my car. I also took the time to cable manage a little, and do a new run for the WiFi antenna under my dash. I have this unit outputting to 2 amps. I have an amp in the trunk powering 2x12" Kicker CompR's, and I have a 4 channel amp under the passenger seat for the 6x9's in the doors and rear deck.

Hooked up my existing backup cam with no issue. They provide a lot of additional connectors, screws and mounts.

Once it was all installed, I threw the SD card in from my old unit and did some BASIC setup of a few apps. I was absolutely blown away by the touch screen and the system. My experience of Android units over the last 4-5 years or so is always the touch screen is bad. This one is not. This is like a mid-premium tablet, it's very snappy and responsive. No lag. I wish I had upgraded sooner. The WiFi and GPS is significantly stronger than the old unit too. I cannot speak to the audio quality via speakers since my amplifiers do the heavy lifting here, but the audio sent to the amps is crystal clear and sounds great. I no longer have bluetooth streaming issues when using BT Audio. It's a strong and capable unit.

I was hesitant about purchasing due to 0 reviews, but the specs looked good and I checked out other [Pumpkin unit](#) reviews to get an idea of brand quality, and thought I'd take the plunge knowing I could return it. Good news is, I won't be unless something catastrophic happens. If you're on the fence, you really should give this unit a chance. It's solid. Build quality is good, device specs are good, responsive, and very capable. Has 2 SD slots too, so you can load up on music/movies/media.

## [How to Prevent Mazda Car Stereo Theft](#)

Actually, you have a variety of options in reducing your risk of car stereo theft. Some cost money, while others are more strategic and are completely free.

## Solutions:

- Check your doors and windows every time you leave the car to make sure they're completely closed and locked. Unlocked doors and open windows pose as advertisements to thieves to target your [car stereo](#) and your other possessions in the car.
- Park your car in a secured area, such as a garage, whenever you are able to. When parking in public, park in well-lit areas that have a lot of foot traffic. Thieves target vehicles that offer the least chance of them getting caught. Cars that are in the dark, parked near an easy escape route or are isolated from the public are more likely to suffer break-ins.
- Keep the stock radio in your car if it works well and you like the sound quality. Thieves very rarely target or steal stock radios, because they don't have much resale value. They also don't fit well in different models of cars, giving them very limited usage outside of the vehicle in which they were originally installed.
- Invest in an [Mazda Android 4.4 car stereo](#) with a removable face if you choose to upgrade your car radio from the stock model. Remove the face of the stereo and take it with you anytime you leave the car. Never leave the face in the glove box or anywhere else in the car, because people often do this and thieves will look for it.

- Consider tinted windows to help prevent thieves from seeing what type of stereo you have in your car.
