

Customer Review on Pumpkin Android Car DVD Ford Mondeo- RQ0545

I bought a new car and wanted to upgrade the [stereo](#) as it had a standard ford 6000CD head unit. I always wanted one of the swishy sat nav head units so I started researching after-market [ford car dvd players](#) and decided for one of these after lots of forum posts.

I have included a video showing my fitting which I managed to complete within an hour, I am not a professional nor am I especially adept at doing these things. I just did plenty of prep work and watch a number of youtube videos for stereo replacements. Also make sure you have the right tools. You need a t20 torx screwdriver and a set of plastic prying tools which are a matter of a few quid but save you from trashing your dash. You CAN fit this yourself EASILY!

NOTE: my car is a 2011 [Ford Mondeo](#) – (2011-2015 model) Not listed in the compatible list but it fits and works although I had to buy an adaptor for the aerial

The [Pumpkin](#) stereo runs [android 5.1](#) and gives you full access to the play store. You can connect to the internet via wifi which has a strong enough antenna to pick up the signal from my drive to the house so when get into the car I tend to check for updates etc before pulling off. You can tether it to your phone or buy an additional USB [3G Dongle](#) at about £15 which plugs into one of the USB sockets which come from the back of the unit. Boot time is around 20 seconds which isn't a major as the unit picks up where it was left off. It doesn't bother me in the slightest. By the time I have got buckled up and reversed off the drive to head off I am only about 2 houses up the road and it is up and running. You get about 2 gig of free space built in but this is expandable via microSD and USB

When you go into reverse the unit shows a yellow triangle warning which is where it would display you reverse camera image should you have one. I will be fitting one shortly to make use of this feature as I think it is great.

The standard ford 6000CD stereo has an amplified antenna. This android car dvd ford mondeo has a blue cable from the ISO block which is powered which can connect to your aerial to amplify the signal which sorts out any signal problems users might be having. as you can see from the video I had to buy a twin FAKRA to [DIN](#) adaptor which was amplified and connect that up, takes about 5 minutes and requires you to slice back the blue plastic coating on the antenna wire from the stereo which I did with some garden pruning sheers but a Stanley knife would do if you don't have proper wire strippers.. This blue wire is marked up clearly. I then just crimped it to the adaptor. takes about a minute to do.

This works with my dash board and steering wheel controls as I used the CAN bus connector. This is the one with the RED block attached. the CAN is a little car computer which controls things and allows communication between things like your stereo and car. The only thing to say is that some of the features have the buttons on my steering wheel mapped the wrong way round. for example if you want to skip to the next music track left and right are the other way round. not a major but something to be aware of. Volume works fine and the M button in the middle changes between radio, video, dvd etc. The only thing that doesn't work is the voice commands built into the car but the head unit has google voice control anyway so not a big deal, plus I hadn't used the voice commands.

There are 2 microSD slots on the face of the ford [android car dvd](#). One labelled GPS and another labelled SD. you can put an

microSD in either but the idea is that your GPS card is where your maps etc are going to be stored whilst the other is for media. You can store your apps on your SD card as well to increase the storage space.

I can play tv shows and films from a USB memory stick through the stereo without any problem. DVDs are region free.

Bluetooth works really well with your phone book being able to be downloaded and names being displayed when a call comes in. A simple touch on the screen to answer or decline the call. this isn't invasive if you are using sat nav at the time. In addition to this you can play music from your phone via the stereo and control the tracks from the steering wheel which means no more silly aux leads!

The default sat nav is google maps but this require data so consider using 'HERE WeGO' which is free and works offline once downloaded. You can keep with it being online as it then gives you traffic updates.

To update the ford in car dvd you would need to download the update on a memory card or stick as it doesn't do over the air updates.

I am getting an error on boot up at the moment but this doesn't effect in anyway the functionality of the stereo. I just click 'ok' and it goes away. This is a software bug with android rather than the stereo however I have contacted [Pumpkin](#) directly about this and they have been excellent in trying to solve it. There developers are looking into this now. Whilst I could knock a star off for this I am not going

to. Whilst it is a minor irritation I am really impressed with the manufacturers response to trying to solve this.

I love this android car dvd ford mondeo and would definitely recommend this to other drivers!

**[Customer Review on Pumpkin
Android Audi A3 Car DVD
Player Head Unit](#)**

My car: [Audi A3](#) Sportback year initial registration 04/2012
[Audi radio](#) concert 3 (concert 2Plus)

Disassembly of the concert 3 is very simple. The supplied cable Plug and carefully pull out the [car radio](#). Then pull the antenna cables and the complete black harness Quadlock plug (see Figure 3). To move the black lever upwards and remove the entire block. Thus, the concert 3 is expanded radio.

[Pumpkin](#) Moniceiver is also quickly and easily made. Initially, the two screws must be removed from the DVD drive. For the main connection, two different wire harnesses in the scope of delivery are included. Once the ISO connectors and with the Quadlock plug. In my case it's necessary to set the cable with

the Quadlock connectors, also the CANbus box was already connected to this cable.

The handling is self-explanatory. Even I as iOS users get along with Android easily. So if you have questions, they're all simple questions. In the PlayStore I pulled directly NAVIGON, because I think it's better as Navi, especially since the cards are all local, and the navigation system can be used offline. On the front micro SD card I have music and I use the USB Sockets then for USB sticks with movies. Otherwise, the radio otherwise behaves like a tablet of the apps here. Whether Bluetooth or Wi-Fi everything works.

The steering control will still work. My iPhone phone book was read and left on the steering wheel is selected as with the concert 3 also. This has remained unchanged. Especially since the buttons can also be programmed, because I didn't come on but still. I look at it on occasion.

The red button illumination is the on the way when light on. Actually getting the tag have light LEDs, it remains red keypad backlighting on the radio.

FIS wird nicht unterstützt.

The processing of the radio is good. The size fits it like a glove (as if it was as delivered from the factory). This thumbs up!

Conclusion: A car radio with features of a Smartphones or tablets! Android makes it possible! Very horny! I would

definitely buy [it](#) again!

[Customer Review on Pumpkin Universal Android 5.1 Car GPS Stereo Double Din--RQ0264](#)

First of all I want to Thank [Pumpkin](#) Customer service. They are really helpful, I had some problem with my order and they have helped me very fast. Thank You!

OVERALL ABOUT PRODUCT

This review will be about 7 inch 1024*600 [Android 5.1 double din Quad Core Car stereo-R00264](#).

There are few [Pumpkin car stereos](#) available, but I chose this one because I like how it looks and also screen resolution was very important to me. Screen quality is very good, touch screen – very responsive and picture quality – amazing. Just what I wanted! This is my second [Android car stereo](#) in my car. I have two Android units in my car – one [Pumpkin double din](#) and another custom made Nexus tablet, one for navigation and another for entertainment.

Quality for the price is very good. Everything works as it should, as my oem radio. When you will start car it will continue to play track, or will jump to same radio station or any app you have used, before you have switched ignition off. Navigation also works very good. I have downloaded google maps offline maps. And also GPS signal is very good, even with GPS antenna hidid under dash.

I could not find anything very negative about this [Pumpkin car](#)

[radio](#) yet. BUT little improvements would make this unit more premium:

-Screen feels a bit plastic. – glass screen would make this model more premium – also to look and feel more expensive.

-Better integrated EQ – easy fix is to download better from Play store.

-MORE Launcher THEMES – also there many launcher apps in Play store, but not many people know how to install them.

FITTING

I have managed to fully fit this unit in my Avensis in 1 hour, but I still have some problems with fascia. I have to make some modifications to make it look nicer. Unit came with all necessary cables, exactly same as you can see in product page pictures. I have bought Steering Stalk Control for my car to connect steering wheel controls to Pumpkin stereo. And everything works perfect. You can also set function for every steering wheel button individually in settings.

Most important FUNCTIONS

-APP resume when you start car.

-Screen brightness changes when you switch light on/off.

-You can set time after how many minutes unit to shut down after ignition switched off.

-Bluetooth hands free calls – It connects automatically when your phone is in range. Call quality is very good even without external mic. You can change to auto answer calls in settings.

-Steering wheel controls – works very good. Not expected to be so easy to connect. Plug and Play. (if you want to connect steering wheel controls just buy Steering Stalk Control instead of wire harness for your car)

-Easy change button LED light colors to match other interior buttons.

Basically it is Android tablet with all the same functions as your home tablet plus it has a lot more special functions. So

far I am very happy with all function and quality. If you have any question or you need any help in fitting, just ask here. I will try to answer ASAP.

Car accessories that can work with this head unit: [headrest auto dvd player](#), [rear view camera](#), [3G dongle](#), [OBD dongle](#), [DVR camera](#) and [other auto accessories](#).
