Mercury Montego	2005-2006
Ford Edge	2007-2009
Mercury Mountaineer	2007-2009
Ford Expedition	2007-2009

After Installation:

I have just received this [android autoradio dvd gps](#) and installed [Pumpkin](#) for Ford. I have installed this [android double din radio](#) on 2004 Ford F-150 Lariat and also 2005 F-150 Lariat. It is exact fit for both pickups, you do not need a frame or any other part. Installation and connecting the wires are extreme easy because this [car dvd](#) comes with sockets and adapters for Ford manufacturer connection fitments. Hook up the cables with no soldering, no cutting, no taping and no extra wire running. I kept GPS antenna above the device not even needed to take it outside on the dash or anything. Very good reception. This [Pumpkin car stereo](#) is extreme fast and very responsive. Touch screen and everything is just perfect, i mean i cannot explain how happy and satisfied i am with this

product.

I am also going to install esky [back up camera](#) with wireless receiver and transmitter. For that reason i didn't close up the dash frame completely yet as you seen in my photos.

-by Yalcin

I installed this [doubt din navigation radio](#) like in minutes. All plug n play. My car is a 2005 Ford Freestyle.

Issues I had was Mirrorlink, but I got an link for an update and works fine.

The radio covers lots of Ford cars, but the one issue is the Can-Bus adapter. Some will get reverse sense for backup while other need to wire to reverse wire(Me). Also RES on the Freestyle is not retained. I see this as very common (Read Entertainment System (DVD)).

This I will look into when it gets warmer.

-by Old Guy

This [android double din head unit](#) came very fast and is 100 percent plug and play in my ford.works amazing awesome screen resolution.a definite 5 star on performance and installation.

Customer Review on Pumpkin Android Double Din Car Radio for Chevy Chevrolet GMC

Installed in 2007 Chevy Avalanche:

Had this [android double din car radio](#) installed in my 2011 silverado. Looks stock and is way more advanced than radios on new cars. I hit up a WiFi Hotspot to download apps. The [OBDII](#) thing is cool. Crisp picture and sound. Lots of options. Wallpapers are download able from zedge. Bluetooth is simple. Navy system is great.

If you install the 2 inch round speaker thing, cover it with a roll of E tape, it's super loud for the key chime and blinker click.

Update. I purchased another silverado, LTZ eddition, so I ordered one more of these radios. This time I installed it myself. Some flat screwdrivers and a 6mm socket. No cutting

and splicing wires. Plug and play. Complete install except for [back up cam](#) in 30 minutes

Nick Fury had this radio in caption America Winter solder. In the Chevy that had everything.

– by Haelix

This [android dvd player](#) was bought to improve my silverado on the resell value. I'm very impressed as it looks like it's a buyers option. The radio has many features, more than I need but for the price I'm not dissatisfied. The radio is basically a plug and play but I had to break alot of plastic in the dash housing to make it fit as well as stuff all the wiring wherever I could. I don't use the camera so I would like to know how to keep the radio on when in reverse, maybe cutting a couple of wires. Overall I'm very happy giving this is the 3rd radio I've installed in my truck and hope this is the last.

–by Creig Denton

This [android head unit](#) is awesome has so many features to choose from for intertarnment in the description it says for 2009 – 2011 gmc acadia with bose but worked awesome on my 2007 gmc acadia slt if your glove box has the code v2p on vehicle sticker this unit will work. Its a simple plug and play and running of acouple cords and antenna sterling wheel controls work great.

Customer review of Pumpkin Android 5.1 Car GPS Stereo for VW

A few months after [Pumpkin Android 5.1 Autoradios](#)' Release, customers like these adorable head unit very much and they also have something to say, let's check out together:
Installed in **VW Touren fra 14**:

I was very hesitant to buy this [android head unit](#) based on one review, but then I found a Youtube video with a live demo.

In short: it's a cool [android 5.1 car stereo double din for VW](#). It's kind of like having a tablet in your car, with a few

add-ons like radio and a DVD player. I also have a backup camera hooked-up (I could use the pre-installed one instead of having to use theirs). Apps install like on any other Android system. So far I've installed Pandora radio and Waze. There is a built-in GPS, but if you have a hotspot function on your smartphone, you can use Google Maps or Waze as well.

The installation was pretty straightforward in my **2011 Tiguan SE**. The supplied wire harness fits perfectly, and I was able to reuse the existing radio antenna, GPS antenna, and backup camera.

The lines on the backup camera indicating where you're going will only work once the system has fully booted. The camera itself works immediately.

—by S

For those that said the cd/DVD player of this [android 5.1 autoradio gps for vw](#) will not accept a cd/DVD all the way, you need to remove two screws on top of the unit prior to install.

PROS:

- Perfect fit in **2010 Jetta**, pure Android, Quad Core processor
- VW wiring harness included, just plug and play
- steering wheel controls work when the included CANBUS adapter is installed. Plugs into the harness. But you need to program the controls by selecting steering from the main menu then selecting MODE. You then press which function you want to program such as “volume up” on the touch screen then press the “volume up” button on the steering wheel for the unit to learn which buttons do what. When complete, press the OK/save icon. I got volume, next/back, and call answer/end buttons to work.
- GPS appears to work. Finds my location quickly but I haven't tried the interface for navigation yet. I always use my phone for nav so might not use this capability. I did notice that you can store gas mileage information in the GPS section which is handy.
