Install the Pumpkin Radio AA0452H on my Opel Vectra C GTS 05

After a long time, I finally decided to buy [the radio](#).

I drive an Opel Vectra C GTS 05.

The old standard radio did its job, but the radio reception was sometimes really bad, even using a Bluetooth transmitter

to listen to music via Spotify was a real pain after some time, depending on the region where you were traveling, the reception was so bad that I just turned the radio off because a constant noise is just a pain.

The radio came pretty quickly. Then I went straight to expanding the old radio. First remove the 4 Torx screws with a T8 screwdriver so that I could remove the radio from the radio slot using the supplied pull-out brackets, then carefully removed all cables and loosely screwed the frame from the old radio using a T20 screwdriver to remove it.

Then I plugged the specially ordered antenna adapter into the radio, screwed the wifi antenna and glued it inside the car and then the same thing again with the GPS antenna. Then I connected all the other cables and inserted the radio.

Then I pushed a 32GB SD card into the slot for the GPS card and pushed a 128GB SD card into the SD slot.

Then I started the engine and the radio went on.

The first start took a little time because everything had to be loaded first. The two memory cards were recognized directly and I still had to assign which card should do what.

After setting up, I switched off the engine and the radio went off on its own. After restarting the engine, it started again and was ready to start very quickly.

I park about 10m away from my house, nevertheless I have a very good WiFi signal to my home network. The connection via Bluetooth with my Galaxy Note 10 works very well and by itself.

The radio quality is a difference like a day and night, so highly recommended.

The quality of Bluetooth tested with me with Spotify, again a whole lot better.

Navigation via the Google Maps app on the radio works super well and without any problems.

I had to relearn the steering wheel buttons but it was half as wild and you have a lot of different options that you can put on the buttons, which I really like.

On the whole, I am very happy to have chosen the radio. So now

I have a super car radio with a lot of functions that really work.

I highly recommend it.

Customer review on 7" Android 9.0 Car Stereo Radio for Opel

I bought this unit for an old vehicle: Zafira B. I did have some issues fitting it, but customer services were fast to respond. It turns out that I needed to remove a bracket at first, which was causing issues.

The unit has operated well, a week in, and although I have not connected everything (DAB+ unit) it was a bit awkward to get it all in. I guess I could remove some dash to fiddle easier, but time is fairly premium at the moment.

Being able to play my Spotify through this unit is excellent. You can download your music library using the Wi-fi outside your home and it downloads quickly. Adding My google account to the car and being able to check email, my calendar, and even watch Youtube through it is great. The head unit is fairly responsive and like I say the sound quality is really good, A lot better than the standard head unit. Using My phones Mobile WI-FI Hot spot takes this unit to another level. Connected to Bluetooth I can make and receive calls and what makes it a great is the combination of the Android operating system which runs all applications well. I am very happy with the Unit and the customer support I have received.

Great customer service though!
