

Customer review on 7" Android 9.0 Car Stereo Radio for Opel

I bought this unit for an old vehicle: Zafira B. I did have some issues fitting it, but customer services were fast to respond. It turns out that I needed to remove a bracket at first, which was causing issues.

The unit has operated well, a week in, and although I have not connected everything (DAB+ unit) it was a bit awkward to get it all in. I guess I could remove some dash to fiddle easier, but time is fairly premium at the moment.

Being able to play my Spotify through this unit is excellent. You can download your music library using the Wi-fi outside your home and it downloads quickly. Adding My google account to the car and being able to check email, my calendar, and even watch Youtube through it is great. The head unit is fairly responsive and like I say the sound quality is really good, A lot better than the standard head unit. Using My phones Mobile WI-FI Hot spot takes this unit to another level. Connected to Bluetooth I can make and receive calls and what makes it a great is the combination of the Android operating system which runs all applications well. I am very happy with the Unit and the customer support I have received.

Great customer service though!

Methods to Get MirrorLink Work on Pumpkin Android 4.4 Head Unit (for iPhone Users)

MirrorLink is a protocol that devices like your smartphone and in-dash car stereo can use to communicate. It's invented by the Car Connectivity Consortium (CCC) which established in 2011. The protocol formerly known as Terminal Mode. If you've ever cursed your car for not doing all the cool stuff your iPhone can do, MirrorLink will save your poor car's feelings from your terrible wrath. Here are the methods for iPhone user to get MirrorLink work on the [Pumpkin Android 4.4 head unit](#):

Method 1 : Using the iPhone's hotspot

1. Active your iPhone's hotspot. Go to the "Personal Hotspot" and active it.
2. Go to the Pumpkin Android 4.4 head unit's "WiFi" setting and connect the iPhone's hotspot. If the head unit can't connect to the hotspot, please reset the iPhone's hotspot.
3. After connecting successfully, go to the iPhone's control center and click "Airplay".
4. There are two choices – "iPhone" and "EC-Mirror-MM". Choose the latter one and click "Mirroring". Then you can get MirrorLink work on your Pumpkin head unit.

Method 2: Connecting the same WiFi network

This method is pretty simple. All you need to do is connecting [Pumpkin head unit](#) and your iPhone to the same WiFi network. After that, go to the iPhone's control center and click "Airplay " to "Mirroring".

Here's a video guidance of using MirrorLink on Android head unit: <https://www.youtube.com/watch?v=tV7U2KqmNLU>
