

Dual Screen Portable DVD player & Twin DVD player

Dual screen DVD player is common used now, but do you know dual screen DVD player can be divided into two types? It can be divided into dual screen portable DVD player and twin DVD player. Although they seem similar, each DVD player offers a very different set up to the other and has different advantages and disadvantages. These two are ideal for in-car.

Dual Screen Portable DVD player

- Share the same movie on both screens
- The slave player can not accept DVD discs and cannot play another different DVD movie.
- Slave player can be powered by main player
- Lower price than twin DVD player

EASY TO SHARE A DVD

WATCH 2 DIFFERENT DVDS

Twin DVD player

- Share the same movie on both screens
- Watch different movies on each screens
- The two screens can be split up from each other and used totally independently to the other
- Offers a much more flexible solution
- More expensive than dual screen portable DVD player

When considering which portable DVD player set up to buy the main influencing factor is always going to be the part you value most. For example, the twin DVD player able to meet age and gender gap between kids. But if your kids are similar ages and are happy to watch the same movie, then a dual screen portable DVD player may well be the ideal solution.

[Pumpkin](#) supplies dual screen DVD players and twin DVD players. You can view [Pumpkin](#) full range of portable DVD players.

The difference between DVD player and Blu-ray player

To enjoy your DVD and Blu-ray collections usually you will need a DVD or Blu-ray player. The obvious difference between a DVD player and a Blu-ray player is the laser technology which used to record and play back the data. There are also other differences between them, including storage capacity, image resolution and player compatibility.

Storage Capacity

Single DVD player can store about 4.7 GB of data. Dual DVD player can store twice the amount of data at 8.7 GB.

Single Blu-ray player store approximately 25 GB of data. Double Blu-ray player can hold about 50 GB.

Laser Technology

DVD players use a red laser at 650nm wave length to read DVD discs.

Blu-ray players use a blue laser to read the stored

information. The wave length is 405nm. This allows for closer and more precise reading of information stored on the disc.

Image Resolution

Almost all DVD players have a standard definition resolution of 480 or enhanced definition resolution of 520.

Blu-ray players are designed for high-definition(HD) display, offering the best 1080p picture quality available. Some of them can display Ultra High Definition (4K) .

Player Compatibility

A basic DVD can be played on both DVD players and Blu-ray players. However, Blu-ray disc can be only played on Blu-ray players, because the red laser used in DVD players is too large to read the tiny grooves in a Blu-ray disc.

People's needs are varied, and we can see the benefits of each. So it may difficult to choose one. [Pumpkin](#) stocks both DVD players and Blu-ray players. You can take a look at.
