

How to Keep Your BMW Android Car Stereo from Being Stolen

Even when you park your BMW in an area that is not known for being at high risk of theft, you should take all of the proper precautions to ensure that your BMW can't be broken into. Otherwise, it might happen like this:

It's important to reduce the probability of items getting stolen from your car as well by having the interior of your car look as unattractive as possible to criminals. This means you shouldn't flaunt an expensive [BMW Android car stereo](#) system in a car and you make sure your security system is fully activated.

Things You'll Need

- Speaker covers
- Fake plate cover
- Security system

Instructions

- Turn your car radio down when you begin to approach the area where you plan on parking. You don't want to call attention to your sound system to any criminals in the area that may hear that you may own an expensive [car DVD p](#)

[layer](#).

- Park in an area that is well lit with traffic and pedestrians often near by. If parking in a parking garage make sure there is a parking attendant on duty and cameras pointed near where you park your car.
- Take anything out of the interior of your car that could attract theft, including loose change, CD case or shopping bags. Place these items in the trunk of your car.
- Place speaker covers over any expensive speakers that can be visible from the outside. Consider placing a fake plate over your stereos head unit so that it looks cheaper than it really is.
- Make sure your car has an efficient security system. A system that is loud and calls attention to your car if it's touched is the best to use. Make sure all doors are completely locked and take note of your surrounding before leaving your car.

Differences between Single DIN and Double DIN Android Car Stereo

If you want to buy an aftermarket [Android 4.4 car stereo](#), you should base on your car's year, make and model. Normally, aftermarket head units are rectangular and the standard car stereo size is referred to as single DIN. Most cars have single DIN stereo slots. The measurement of a standard [single DIN](#) slot is 50mm height by 178mm width. Most car radios will slide directly into the single DIN slot without requiring an additional adapter kit. However, some DIN models may require an installation kit.

The second most common car stereo slot size is the double DIN. Double DIN slots are twice as tall as the standard single DIN slots, but they have the same width as single DIN stereos. We carry double DIN car stereos that slide directly into the double DIN slot. If you have the space, double DIN models are gre

at because they usually feature LCD monitors for video playback and GPS navigation.

Actually, the [double DIN Android head units](#) have become more popular: many vehicle manufacturers (especially of Asian cars) created a DIN CD player for use with a DIN cassette/radio unit. The main advantage to an aftermarket double DIN is that it'll look better in the dash of a vehicle that uses a stock double DIN head unit. A larger head unit can have larger controls and a larger display, which making it easier to use. The best in-

dash mobile video and navigation units are double DIN, because they don't require a flip-out mechanism for the viewscreen.

Regardless of classification (single DIN, double DIN, etc.), the stereo's depth is unique for each model. The installation may require some customization if your vehicle has a relatively shallow cavity. Though you may wish to perform custom installs, it's always wisest to choose a model that will fit your car perfectly. Check out our website to find out what will exactly fit your vehicle. This will save you a lot of time, money and hassle when it comes time to install your car stereo.
