

How to install navigation apps(like Waze, Sygic) to pumpkin android 4.4 kitkat like SKU: KD-C0224?

Mohamad said: Installed the unit today. Yes it is using android KitKat [KD-C0224](#). However when I try to install Waze or Papago it gives error message like “sd card not installed’ or “not enough memory”. How can install these apps to SD card? I really need your help. As I tried as to what you said still the same problem (Picture 1) where you can see GPS SD was inserted. The other thing notice there is no 8GB nandflash see Picture 2. I suspected this causes the conflict. How to factory reset this unit? All navigation apps only cannot be installed. Please advise urgently

Solution: If you want to factory reset the unit, please backup your important things. Please open the settings and find the factory data reset to reset it. I advice you download the waze and sygic apps on you computer, then put it in the SD card and insert into the GPS card slot to install it.
